

**WORLD'S LARGEST MOBILE RESEARCH PLATFORM**

DO MARKET RESEARCH EVERYDAY

## SCALE

Run mobile surveys on our massive panel of 1.6 billion mobile users cost-effectively

## ACCURACY

Deep context of the mobile user and machine learning validation algorithms provide verified responses

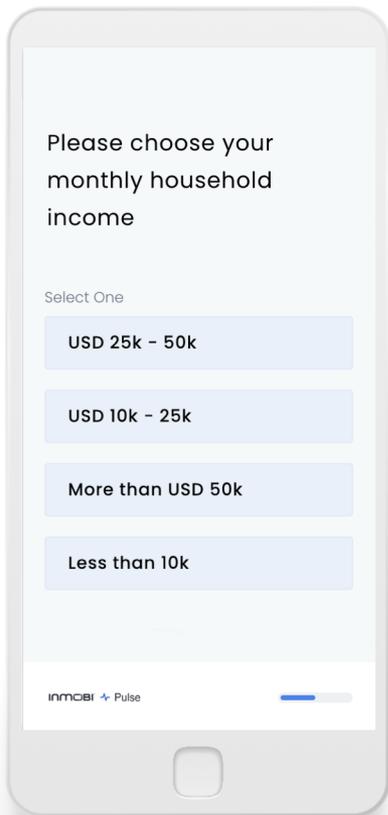

## SPEED

Easy access to target audiences helps in getting responses within hours

inMOBI  
Pulse

# FEATURES

## Accurate User Personas

Multiple user signals like gender, app usage, location, device type, income aggregate into precise behavioral personas that are easy to target at scale

## Polygon Targeting

Accurate and granular polygon locations enable targeting consumers based on their offline movement and behaviour

## Always-On

Study user behavior through their native device constantly for trends & variations in opinions regarding a brand

## Multiple Survey Formats

Use a range of creative formats like video, images, carousels to do research on digital or offline creatives

## Machine Learning Algorithms

ML verified results ensure multipoint corroboration

INMOBI  
Pulse

# TARGETING ACCURACY

## Locational targeting

Locationally target surveys using country, state, zip code, polygons and Point of Interest

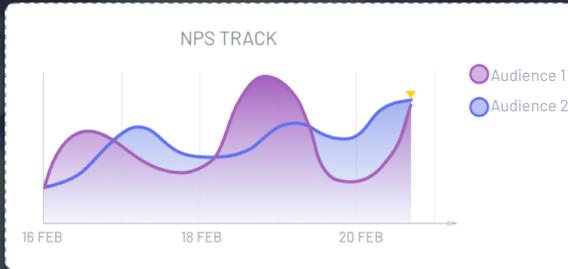

## Detailed Personas

Leveraging InMobi's mobile audience data & acumen, target precise Personas defined using demographic, locational, behavioral and device data

Study trends and variations in your customers' opinions and perception through constant monitoring

Track KPIs constantly across segment cuts and audience clusters

### NPS Studies

Net Promoter Score tracks your customer's willingness to recommend you further

### CSat Studies

Customer Satisfaction tracks the customer feedback and satisfaction with your offering

### Brand Track

Brand track measuring the awareness and perception of your brand constantly

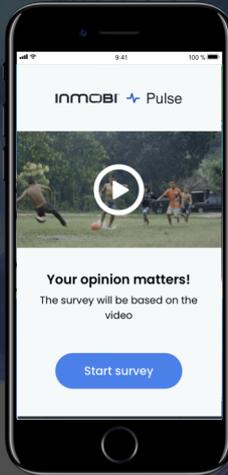

Track your key brand metrics round the clock through Always-On Studies

# RESPONSE QUALITY

## Demographic Patterns

Anomaly detection in demographics through unsupervised learning techniques using signals such as handset models, OS-version, network etc.

## Multi-Point Corroboration

Continuous refinement of detection methods through corroboration through various sources like InMobi's 1<sup>st</sup> party data, partner data and independent verification sources

## Dwell Time

Ability to filter out bad quality responses by matching survey dwell time with the complexity of question and responses

## Response Patterns

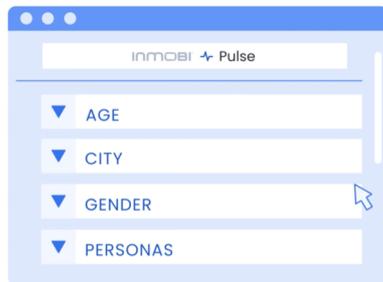

Quality detection by identifying anomalous response patterns, which are then mapped to distribution for a given demographic segment in a given context

Machine Learning based real-time validation

## 1. AUTHOR

Build beautiful surveys using the intuitive survey builder or just choose from existing templates

## 2. TARGET

Choose from a variety of survey targeting options such as age, persona or even a location polygons

## 3. PUBLISH

Simply pay & publish!  
Receive AI-verified responses, graphs, crosstabs on your dashboard
