CHILEAN LOCALIZATION

COSMO CONSULT's Chilean Localization for Dynamics 365 has been created to provide a set of features that allows Dynamics 365 to fulfill the main standards and tributary policies defined by the SII (Internal Taxes Services of Chile). It includes master data management, execution of processes required by the SII (such as monetary correction for assets and inventory), reports generation, and direct communication with the SII.

For the development of this localization 10 professionals were involved investing more than 6500 hours to create what we consider as the best localization for the Chilean Market.

COSMO CONSULT - Microsoft Partner

As one of the world's leading Microsoft Dynamics partners, we offer our customers complete industry oriented solutions based on the Microsoft Dynamics 365, Dynamics NAV and Dynamics AX ERP systems, as well as the CRM SYSTEM Microsoft Dynamics CRM and the collaboration and document management system Microsoft Sharepoint.

Together with the other service components from Microsoft Office 365 and the Business Intelligence systems Microsoft Power BI and QlikView/QlikSense, we create complete digital solutions that can be implemented and used in all the areas of the company.

LOCALIZATION

The Chilean Fiscal Layer provides coverage for the main fiscal requirements.

The Chilean Fiscal Layer contains the following main groups of functionality:

1. Localization Module

In order to facilitate the identification of the parameters required by the location, all its configuration was grouped together in a single module called Latinoamerica Version. Likewise, the generation of fiscal reports, queries or independent processes were grouped in this module.

Fiscal Layer General Settings

The general configuration covers the following points:

MASTER DATA SII

Management of different masters required to send information to the SII within master includes document codes payment terms, tax codes, money tax reason credit notes, purposes for dispatch guides, non-recoverable taxes.

INVOICING POINTS AND BRANCHES

Configuration of branches and issuing points of electronic documents within each branch, also, users authorized to issue them.

TYPES OF DOCUMENT

Creation of own document types for sending and receiving, each type of document will be linked to the types authorized by the Internal Revenue Service (SII).

COLUMNS BOOKS SET UP

Set up the columns required for the presentation of purchase and sales ledgers.

CORRECTION FACTORS

Configuration of the correction factors for monetary correction processes of stocks and fixed assets.

FOLIOS

Check the numbers of different types of documents assigned by the (SII), associating specific ranges, branches and specific emission points.

Setting Standard Master Data

The Chilean localization allows the configuration of fields required by the Internal Revenue System (SII) in the masters of Legal Entities, and master entities like prospects, customers, vendors and employees. In addition, when creating a prospect, customer, vendor or employee the localization suggest the RUT check digit

2. Interaction with Microsoft Dynamics 365 transactions

The localization transversally interacts with the following transactional Microsoft Dynamics 365 modules:

General Ledger
Fixed Assets
Account Receivable

Sales and Marketing
Account Payable
Inventory Management

Procurement and Sourcing
Project Management and Accounting

GENERAL LEDGER

The general ledger journals contain the necessary fields for the identification of transactions of customers or suppliers in such a way that, when posting records from accounting that affect them, the information will be correctly processed by the location reports.

FIXED ASSETS

Fixed Asset ledger enable to generate the asset price adjustment process manually or by means of an automatic proposal. Grouping the transactions in an independent type to any type of the standard, which allows that in the transaction queries the monetary correction transactions can be identified.

Likewise, there is the generation of free text dispatch guides for the sale or movement of fixed assets between different company headquarters, without generating virtual sales or inventory transactions.

CUSTOMERS

It contemplates those movements associated with the generation of transactions by service invoices, manages the processes of issuing documents for the dispatch guides, invoicing and credit notes, maintaining control of folios by type of document and the types of valid documents by point of issue.

The types of documents supported in sales are: Electronic invoicing affects or exempts, settlement of electronic invoices and credit notes affects or exempts.

SALES AND MARKETING

Movements associated with the generation of transactions for sales orders are considered. In each one of these transactions, the processes of emission of documents for the guides of dispatch, invoicing and credit notes are managed, maintaining the control of folios by type of document and the types of documents.

Supported document types in sales are:

1. Electronic packing slip
2. Electronic billing for affected or sales tax exemption
Payment of invoices
3. Notes affected or electronic credit sales tax exemption.

SUPPLIERS

It contemplates those movements generated from invoice journals. In each one of these transactions the type of document is handled and according to it, emission or reception of documents according to the type of supplier.

ACQUISITION AND PROCUREMENT

It contemplates those movements generated from purchase orders (with or without associated projects) and daily invoices. In each one of these transactions the type of document is handled and according to it, emission or reception of documents according to the type of supplier.

It also incorporates the following points: Internal

Control correlative purchases

Set amounts of correlative per user and keeping track of documents recorded in purchase orders.

Invoice issued to third parties

The issuance of documents, maintains the management of folios of the type of document and point of issuance.

INVENTORY MANAGEMENT

Inventory management has available correlatives management for packing slip of internal transfers via transfer request and the process of monetary correction of inventory Article 41.

3. Official Books

Within the location functionality the possibility to verify information from electronic books generated from the solution is provided.

The ledgers included are:

1. 8 Columns Balance
2. Major book
3. Diary book
4. Purchase book
5. Purchase ledger
6. Fee book

4. Data Management Framework

The corresponding functionality was modified to add the necessary fields for the localization in the process of massive data loading. This allows that the massive load of masters or initial balances does not need of additional processes of update or processing and later transformation of data.
