

Internal Stores Requisitions Management

For Dynamics 365

Dynamics 365 F&O
Fact Sheet

product

Solution Overview

Microsoft Dynamics 365 has been extended by Immix to include **D365 Internal Stores Requisition Management (ISRM)**. D365 ISRM has been developed to improve the functioning of stores within an organization. As part of the value-added functionality, users can communicate requirements electronically via an internal stores requisition.

An **internal stores requisition** is an electronic form for the user to communicate requirements for goods (parts, consumables, etc.) needed from storage (warehouse or storeroom).

A requisition contains useful information such as, the required date, financial dimensions (department, cost code, unit costs, number of units required, job numbers, part numbers and part descriptions).

D365 ISRM reduces buffer inventory by integrating with **Dynamics 365** supply chain management. This enables updates made in collaborative-planning and inventory management systems to automatically trigger plan-driven procurement.

Dynamics 365

D365 ISRM Benefits

- Improved accountability and traceability of stores
- Reduce buffer inventory (stock holding), which reduces costs
- Visibility of status of issuing and requisitions
- Visibility of materials charged to specific jobs or departments
- Integrates with back office
- Inter-organization shipping network
- Flexible processing
- Reduced warehousing, shipping and handling costs
- Automatically generates inventory replenishment requisitions and re-ordering
- Order management improved
- Booking stock management

D365 ISRM is available for Dynamics 365 for Finance & Operations.

Please contact us for alternative version availability.

Dynamics AX versions also available on request.

Module and user guides provided.

Terms and conditions apply.

Supporting your business

D365 ISRM facilitates an automated environment to track, manage and approve Purchase Order Requests and Reservations. It provides management with increased control over transactions (cost, outstanding orders, budget alignment and commitments) and allows for full audit trail functionality. Users are more efficient and can get their jobs done effectively.

Workflow allows for full control over who is permitted to initiate, create or approve orders based on company specific authority levels. Integrated dashboards support real-time information to drive cost reduction and optimal inventory levels.

Through D365 ISRM corporate budgets are enforced throughout the entire requisition and procurement process.

Key functionality

- Review, edit, approve or reject requisitions
- Multiple workflow processes
- Approval levels per employee
- Requisition & issue status available to users, improving communication
- Contract management
- Catalogue management
- Inventory & materials management
- Multicurrency & multicompany
- Intercompany transactions & reconciliation
- Alerts & notifications
- Vendor & supplier portals
- Budget support

What does it do?
