

## TechConnector For Textile

### # Framework

This project done in ASP.Net Core 2.1 & Entity Framework Core 2.2

### \*\*Project Short Description: \*\*

Designer upload their designs and share to buyer. If buyer likes the design, they make whole purchase. Collaboration between designer and textile industry.

### \*\*Project Details: \*\*

- This project for collaborating assets between designers inside Textile Industry.
- Super Admin, Business User, Designer, Guest totally four user roles.
- Super admin can edit fields, edit any items uploaded by other users. Create B2B Folder, remove user, change user role.
- Fields can be change dynamically. Added support for CRUD for the fields.
- Business user can approve user requests, add new user.
- Designer can upload the item(cloths) to the database.
- Guests can see the items shared to them.
- Items can be shared to anyone. We mainly split that into internal user and external user.
- Internal User have access the site with login credential. External user doesn't have the credential to access. But they can see items shared to them.
