

Secure Payment Processing

Integrate credit card and ACH/eCheck processing into Microsoft Dynamics 365 Business Central. Processing payments from directly within Business Central will reduce human errors, increase efficiencies, and simplify the overall payment acceptance process.

Simplify PCI DSS Compliance

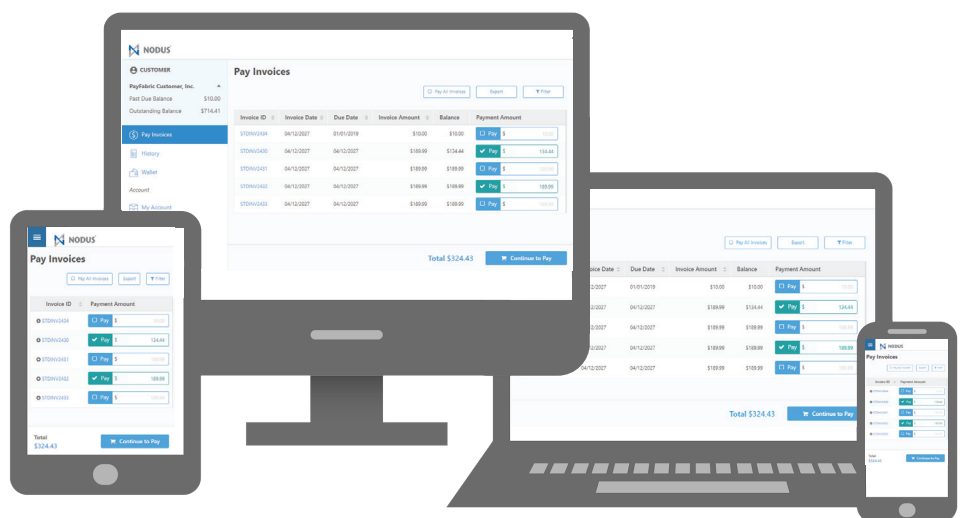

PayFabric[®] is certified to meet the Payment Card Industry Data Security Standards (PCI DSS) to keep customers' data safe. By removing all sensitive payment data from the merchant's local environment, PayFabric can reduce the complexity and cost of the PCI DSS compliance self-assessment process.

Reduce Processing Fees

By transmitting the full level 2 and 3 transaction details from Microsoft Dynamics 365 Business Central documents, merchants can obtain the lowest possible rates for their credit card processing. Our Payment Acceptance team works with you to prevent downgrades, reduce transaction fees, and save you money on purchase and corporate card transactions.

Customer Payment Portal

By implementing an online, mobile-ready customer payment portal with account management, your customers will be provided 24/7 access to view their invoices and account history, make payments, and update payment information. Customers will automatically be notified that new invoices are available on the portal so that they can quickly pay their outstanding and past due invoices. After the customer completes their payment, they will automatically be emailed a payment receipt.
