

CARP-E Anonymizer accelerates public information provision with the help of language technology

Since May 25 2018, the General Data Protection Regulation (AVG) has been applicable. This means that the same privacy legislation applies throughout the European Union. This new legislation requires companies and government agencies to process personal data in accordance with the new legislation. TM7 Natural Language Processing (NLP) specialists offers the CARP-E Anonymizer as a solution for anonymizing personal and unstructured data.

The CARP-E Anonymizer offers the possibility to automatically anonymize documents and texts. CARP-E Anonymizer can therefore take many hours of manual and repetitive work off your hands.

Advantages of the Anonymizer

Be prepared for the future The Public Authorities Act (WOO) will enter into force in the near future. One of the consequences of the WOO is that governments and semi-governmental authorities are obliged to make information that should be publicly available immediately available to the public. Requesting a Wob request is then no longer necessary.

CARP-E helps with further efficiency and the accurate anonymization of documents.

When compared to manual anonymization, the CARP-E Anonymizer offers the following benefits:

• Efficient: Manual anonymization of large quantities of documents requires a substantial amount of time for inspection, analysis and adjustment. Automated anonymization is more than 90% more efficient than manual anonymization.

• Accuracy: The CARP-E Anonymizer is more accurate than manual anonymization.

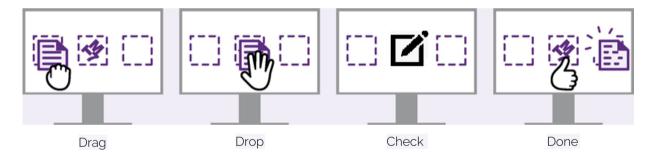

• Costs: The costs per document are significantly lower due to the improved efficiency and accuracy.

CARP-E Anonymizer

Drag & Drop, Check, Done

CARP-E Anonymizer is a very easy to use. If you can use Drag and Drop in Windows then you can work with CARP-E. Editing the PDF can be done in Adobe Acrobat Reader or other commonly used PDF readers. This makes it possible to achieve 100% accuracy for anonymization!

How does CARP-E Anonymizer work?

CARP-E Anonymizer works on the basis of Elements. For example, an element can be a word, number, or phrase. By configuring CARP-E elements with a AVG domain knowledge, a powerful Natural Language process Engine has been created. By means of the "learning" CARP-E engine it is possible to automatically anonymize all kinds of documents.

By using CARP-E Anonymizer, your privacysensitive documents can be anonymised quickly and automatically.

CARP-E Anonymizer assists your team in anonymizing letters, documents and reports regardless of the size. CARP-E Anonymizer makes the documents immediately available in a format that is suitable for publication.

The most important advantage of this tool is the enormous efficiency and accuracy of anonymizing various (type of) documents.

CARP-E Anonymizer has been successfully implemented in the process of several Dutch municipalities, environmental services, hospitals and ministries.

CARP-E Anonymizer contributes to improved services. By automating the anonymization of privacy-sensitive data, you are able to make information available more quickly. Because more information is available more quickly, stakeholders are immediately informed and fewer information questions have to be answered
