SOLUTION SPOTLIGHT:
On-Premises

AssureSign

Explanation

AssureSign's On-Premises deployment is a Microsoft based solution that supports many of our eSignature interfaces. Our On-Premises solution is a viable alternative to our SaaS deployment, allowing customers to leverage their own physical or virtual servers as part of their eSign process. On-Premises deployment allows customers in regulated industries and other enterprises with heightened security needs to employ private servers in secluding all data to in-house processes. Additionally, this deployment option allows all server communication to occur internally, requiring no connection to AssureSign's servers. This platform can be implemented as a hybrid deployment, utilizing aspects of a private or public cloud.

Facts

- Installs on current Microsoft SQL Server (2012+)
- Compatible with Microsoft Azure or private data server
- Integrates with physical, virtual (VM), hyperV, or Azure server
- Functions with any SMTP email server
- Incorporates system monitoring components to ensure system functionality and optimization
- Encrypts all data at rest and in-transit
- Does not require communication with external AssureSign servers

Minimum Application Requirements

- Operating System: Windows Server 2008+ (64-bit)
- Disk Space: 2-4 GB
- Memory: 2 GB
- CPU: 1 core / 1.5Ghz
