

Overview

Product Catalogue App provides an easily way to configure the Items on the Sales Document.

In a business system, every item is defined with a unique code so there wouldn't be any conflict between the items. While creating a Sales Quote or a Sales Order document, you will need to enter the Item Code in Sales Line. If yours is a small business, you might remember every item code in detail but if yours is a big company with many products, it is difficult to remember all the codes. In this situation, you will have to open the item codes' list and search for the required Item Code.

Product Catalogue App helps you solve the above issue. With this App, you don't have to remember all the item codes. You have to categorise the Items into the following three categories.

- **Product:** Product is the first main group to add Main Product details.
- **Category:** Category is the second group to add the sub details of Product.
- **Model:** Model is the third group to add the sub details of the Category Group.

Features:

- Easily Manage the Items based on the Product, Category and Model No. wise.
- Provides an easy way to assign Items on Sales Quote and Sales Order.
- Configure the Suggested Items for specific Items.

Benefits:

- User can easily filter and search the Items based on the Product, Category and Model wise.
- In big organization, it is easily to review Item based on Product, Category and Model wise.
- While assigning Items on Sales Quote and Sales Document, we can easily identify and select Items based on the Product, Category and Model wise.
- It reduces the time and increase the efficiency for Sales Document Transactions.

Try this app now for less complexity, more automation and seamless process. No hassle of remembering codes or keeping a track of all the codes, thus increasing productivity.

This extension supports both the Essential and Premium edition of Microsoft Dynamics 365 Business Central. This extension is available in the United States.
