# Microsoft Dynamics™ AX2009 | AX2012 Dynamics 365 for Operations

## Secure Payment Transactions

- Application encryption keys ensure that credit card data is never stored or transmitted unencrypted
- Hosted Pay options are available for select processors
- PCI Validated
- Supports EMV and Chip & Pin

## Payment Application PCI PA-DSS Validation

Red Maple's Advanced Credit Cards includes PA-DSS 3.2 Validation, which conforms to Visa's Processor Application Best Practices (PABP). All application encryption uses the .Net encryption framework which means data is secure without any additional database implementation or setup.

## Handle Complex Transactions

- Process orders with multiple cards and transactions
- Integrate with Advanced Warehousing
- Use Purchase Level 2 and 3 cards
- Accept Gift Card transactions
- Support Card Verification Data (CVD) transactions

## Increase Efficiency & Reduce Administration

- Receive payments via credit cards in customer payment journals
- Process prepayments or capture funds on picking list, packing slip or invoice
- Reduce administration with automatic authorizations
- Assign users or bank accounts to terminals for streamlined reconciliation

## Tokenization/ Profiles

For companies that don't want to store credit card data locally, Red Maple provides the ability to store cardholder information with providers that support Tokenization and/or Profiles.

*Actual features available depend on the processor and version selected.*

*Contact Red Maple for more details.*
