

IDENTIFY

- Detect Duplicate Leads/Accounts/Contacts using our intelligent matching logic
- Augment our matching logic with your specific business rules
- Create several sets of match criteria that can even extend to related records
- Fuzzy matching eliminates typical data-entry errors
- Identify email and phone matches across multiple fields.
- Identify merge-winners using your business rules that can extend to related records

TAG

- We automatically tag the Lead/Account/Contact duplicates for your review
- You validate tagged duplicates within CRM before merging occurs

MERGE

- Our AutoMerge tool replaces the tedious built-in Merge Wizard
- AutoMerge performs the merge for you preserving data field by field
- Trigger AutoMerge yourself on multiple duplicates in a CRM list view
- Set AutoMerge to automatic mode.

Online/On-Premise v2011/13/15/16/D365

CRM versus AutoMerge: Duplication Detection

FEATURE	CRM	AUTOMERGE
Whole String Match (jess@acme.com matches jess@acme.com)	✓	✓
Partial String Match (first 5 characters of ZIP: "97225" matches "97225-6700")	✓	✓
Multiple Sets of Match Criteria	Limited	Unlimited
Match Criteria using fields on Merge-able Record (e.g. Contact)	✓	✓
Match Criteria using fields from related records (e.g. Parent Account's Main Phone)		✓
Alternate Spellings / Common Misspellings / Phonetic ("Snider" matches "Snyder")		✓
Firstname=Nickname Matching ("Bob" matches "Robert")		✓
Phone Punctuation Ignored "(503) 555-1212"="503.555.1212"="15035551212"		✓
Company Name Variants ("The Acme Company" matches "Acme")		✓
Street/State/Country Address Variants ("123 W. Main St" matches "123 West Main")		✓
Emails Match Across All Email Fields (3 out-of-box fields default, configurable) [email1: jess@acme.com matches email3: jess@acme.com]		✓
Phone Numbers Match Across All Fields(11 OOB fields default, configurable) [Home phone: 503.555.1212 matches Other phone: (503)555-1212]		✓
ZIP Codes and Streets Match across the First and Second Address Blocks		✓
Match Precision metric informs you how close a match for each duplicate set		✓
Duplicate Detection Partitioning		✓
Match Leads to Existing Accounts (no merging performed)	Limited	✓
Match Lead to Existing Contacts (no merging performed)	Limited	✓

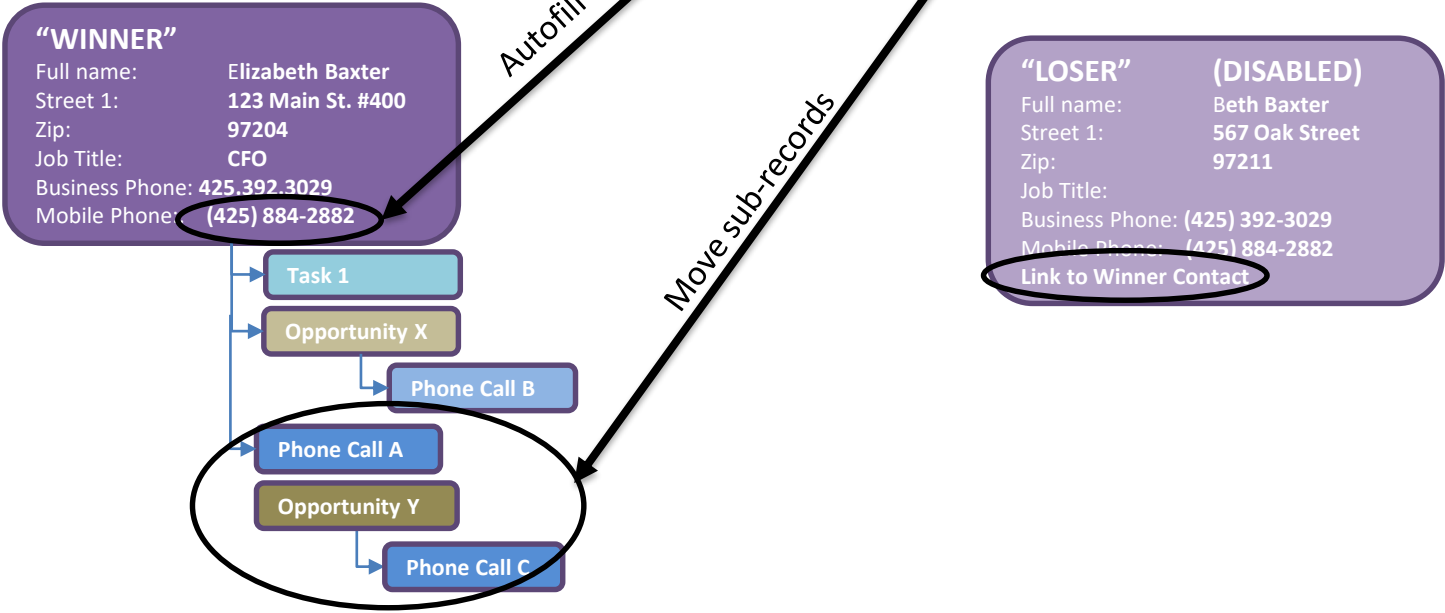

CRM versus AutoMerge: Merge Functionality

FEATURE	CRM	AUTOMERGE
Manual Merge Dialog	✓	
Manually Merge for up to 250 Duplicate Sets at a time		✓
Automatically Merge for All Duplicate Sets		✓
Match Precision metric available for each Duplicate Set		✓
Preservation of populated fields otherwise lost on designated loser record		✓
Address Block Preservation (2 Address Blocks, configurable) as a block.		✓
Merge-winner determination from fields on to-be-merged record (i.e. Contact)	✓	✓
Merge-winner determination from fields on related record (i.e. Owning User/Parent Account/Business Unit/Primary Contact)		✓
Quickly Validate and Modify Merge-winner determination		✓
Quickly set one or more records to be ignored by duplicate analyzer and merging		✓
View Historically Merged (Loser) Records from within the remaining Winner record		✓
Dashboards of historical and upcoming merges		✓
Configure merges to be performed Outside of Business Hours		✓
AutoMerge Express: Merge two records quickly that aren't tagged		✓

Standard Match Criteria

LEAD MATCHING	ACCOUNT MATCHING	CONTACT MATCHING
Name ¹ - Phone ^{1,2}		Name ¹ - Phone ^{1,2}
Name ¹ - Street ^{1,2}		Name ¹ - Street ^{1,2}
Name ¹ - Postalcode ²		Name ¹ - Postalcode ²
Name ¹ - City ²		Name ¹ - City ²
Name ¹ - CompanyName ¹		Name ¹ - ParentCompanyName ¹
Email ²	Email ²	Email ²
CompanyName ¹ - Phone ^{1,2}	CompanyName ¹ - Phone ^{1,2}	
CompanyName ¹ - Street ^{1,2}	CompanyName ¹ - Street ^{1,2}	
CompanyName ¹ - Postalcode ²	CompanyName ¹ - Postalcode ²	
CompanyName ¹ - City ²	CompanyName ¹ - City ²	

Key:

1. These fields are “fuzzy” matched which catches nicknames, misspellings and alternate spellings.
2. These fields are matched “cross-field” meaning across all equivalent fields on the record. E.g. emailaddress[1,2or3]

AutoMerge - FAQs

Q: How does AutoMerge determine what is a “duplicate” Lead, Account or Contact?

A: Our default matching logic has been tested against 100s of millions of real CRM records and uses combinations of Name, Address, Telephone, Email, etc... to find duplicates. If you need to include your customized fields in the matching logic, that works too. Remember that you will always be able to validate the duplicates found prior to "AutoMerging" them.

Q: What is a “Data Quality Report” exactly?

A: The report is a summary analysis of your entire set of Leads/Accounts/Contacts. For each of these entities, you will see how many duplicates were detected using our default matching logic and some clues as to how we found them. You will also receive an Excel file of several hundred sample duplicate sets from your CRM for you to validate individually. The Data Quality Report provides actionable insight as to how serious your duplicate problem has become. The report is provided free, and none of your CRM data is modified in the process.

Q: How does AutoMerge determine the primary record which will "win" the pending AutoMerge operation?

A: The default logic would have the most recently updated Lead/Account/Contact win the pending Merge, but this can be customized to follow any decision logic you can imagine, including referencing information on related records such as Activities, Opportunities, Cases or Custom entities. On a set by set basis, you can change which record should "win" the pending AutoMerge operation by using our "AutoMerge Set Primary" button.

Q: Where does the non-Primary Contact go after it's been AutoMerged?

A: The non-Primary record(s) are disabled but not deleted. Merged Leads/Accounts/Contacts can always be seen in a subgrid from the remaining Primary record. That is until such time as you decide to Bulk-Delete them to recover the disk space they occupy.

Q: The built-in merge wizard lets me choose fields to preserve from each record, how does AutoMerge handle this?

A: AutoMerge has an end-user-configurable set of fields that are reviewed prior to every AutoMerge operation. During the AutoMerge process, for each of the fields, if the Primary record has no value for that field, and the non-Primary does, that field is copied from the non-Primary into the Primary record. The built-in CRM merge wizard is much too cumbersome and error-prone to use for more than a few sets of duplicates.

Q: Can I control which duplicate sets are AutoMerged?

A: Yes! No duplicate sets are automatically merged until you say so. You can use our "AutoMerge" command bar/ribbon button to merge sets yourself, or tell us to get it done off-hours. AutoMerge also has a "Match Precision" % field to let you know how similar the records in each set of duplicates are. With this you can have us AutoMerge all dupes sets above X% and manually Validate/AutoMerge the rest yourself.

Q: Can I ignore specific records from AutoMerge?

A: Yes, use our "AutoMerge Ignore" command bar/ribbon button to ignore specific records from being merged and ever matched up again.

AutoMerge – FAQs (cont)

Q: How are duplicate records getting in my CRM?

A: Dynamics CRM allows several ways to input leads, account and contacts. Manual entry, import wizard, and data integrations with other business line systems. All of these processes result in duplicates. Your end-users will know if there's a duplicate problem if they are in the CRM daily but they probably cannot quantify it. Our no-obligation data quality report will tell you how many duplicate leads, accounts or contacts you have and even give you some examples.

Q: “Fuzzy” what?

A: “Fuzzy Matching” just means not exact, but close enough. Our fuzzy matching logic will find duplicates regardless of the various ways we humans enter data. Ask ten people to create a single new Contact record with the usual name, address and phone fields and you'll get ten different results. AutoMerge will find these duplicates and match them up.

Q: How does your Cloud service work if our CRM is On-Premise behind our corporate firewall?

A: Our service works with CRM Online, Partner-hosted or On-Premise with Internet Facing Deployment. Let us know if you are running CRM behind a closed firewall as we have ways to overcome this and still keep your network safe.

Q: Is my CRM data safe?

A: We take the security of your data very seriously. #1 - we only transfer the few fields necessary to detect duplicates, never any sensitive fields. #2 - your data is transmitted using SSL encryption and resides (at-rest) on our Azure Analysis servers encrypted AES_128. #3 - we promptly delete your data when analysis is complete.

Q: Our CRM has several business units which may contain legitimate duplicates across them. How do you avoid detecting and AutoMerging them?

A: Of course, we can partition your data just about any way you can imagine. This is no problem.

Q: What versions of Dynamics CRM does AutoMerge with?

A: AutoMerge works with CRM 2011/13/15/16/365. On-premise, CRM Online or Partner-hosted.

Q: Do you have a Partner program?

A: Yes we do! Dynamics CRM Partners are welcome to join our partner program and receive several benefits including free AutoMerge use. Contact us at sales@genbil.com

Typical AutoMerge Engagement Steps

1. Data Quality Report
2. AutoMerge Agreement (Draft)
3. Discovery Session - Requirements Gathering
4. Final Quote Agreement & Custom Configuration Approval
5. Import AutoMerge Managed Solution
6. Initial Analysis & Tagging Cycle
7. Customer review of duplicates / Manual AutoMerge
8. Re-tagging duplicates (if necessary) / Manual AutoMerge
9. Fully automated AutoMerge
10. Manage AutoMerge Requests via Portal

AutoMerge List Prices

One time Use

- One time Analysis and Tagging of your duplicate Leads/Accounts/Contacts for any sized dataset.
- AutoMerging Duplicates
 - One-time driven from our Azure Server
 - OR -
 - Customer AutoMerges duplicates themselves at their discretion over time.
- Default Match and Merge-Winner Logic
- \$0.10 / Tagged Duplicate
- Minimum \$495

Standard Subscription

- Manage AutoMerge Requests via Portal
- Analyze, Tag & AutoMerge your duplicate Leads/Account/Contacts on your own schedule.
- Includes 2 Million Analysis Credits
- Customization of Match and Merge-Winner Criteria allowed with-in default set of analyzed fields.
- **\$2,995**

Premium Subscription

- Everything from "Standard"
 - ~ PLUS ~
- Up to 8 hours Analyst Consulting
- Additional 3 Million (total 5 Million) Analysis Credits
- 1 customized Merge-Entity to include analysis of custom fields
- Up to 20 custom fields/merge-entity
- 1 Related Entity for Merge-Winner Analysis
- Merge-Winner Related Entity records not count against Analysis Credits (but limited to 1 million records / request)
- **\$4,995**

Add-ons (á la Carte)

- + 1 Million Analysis Credits \$495
- + 5 Million Analysis Credits \$1,295
- + 25 Million Analysis Credits \$4,995
- + 50 Million Analysis Credits \$8,995
- + 100 Million Analysis Credits \$14,995
- Upgrade from Standard to Premium \$2,000
- Custom Analysis & Configuration (Premium Only)
 - ONE additional Merge-Entity \$995
 - ONE additional Merge-Winner Related Entity \$495
 - 4 Hours Analyst Consulting \$795

Standard and Premium Subscriptions are valid for ONE year. If additional Analysis Credits are purchased, they expire one year after the date previous credits expire.

Data Safeguard Practices

Genbil takes the security of the Company's CRM data very seriously and therefore implements several industry recognized precautions to safeguard it.

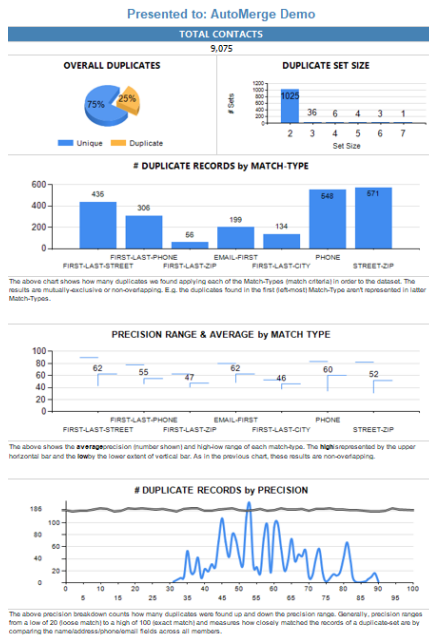

- AutoMerge service only collects fields pertinent to analysis of duplicates. This includes Personally Identifiable Information (PII).
- Data is only transmitted via SSL or a VPN connection directly to/from our Azure Cloud servers. If Company uses Dynamics 365, their CRM data will never travel over Internet at all since it already resides in an Azure datacenter.
- Company's AutoMerge profile defines which Azure Datacenter their data will be processed.
- Data is encrypted at-rest using SQL Transparent Data Encryption (TDE) using AES_128.
- Only Genbil's managing partners and delivery-path-based analysts have access to analysis servers.
- All personally identifiable information (PII) is scrubbed directly following AutoMerge analysis.

What is the AutoMerge Trial?

Our trial consists of **two parts**. The trial typically commences automatically after you verify your CRM Connection using a custom URL we email you. Filling out the secure online form, you grant credentials to your CRM, and trigger a trial analysis.

Part 1: Data Quality Report

Analysis of CRM's Accounts/Contacts/Leads.

Summary:

- > From 9,075 total records, we found 2,249 (or 24.78%) duplicates using the various MATCH-TYPES in the chart above. A duplicate set is always comprised of 2 or more records (1 Winner and 1 or more Losers). The average duplicate set size for this dataset is 2.09(records/set).
- > There are 1,077 (or 11.87%) Winner duplicates. This number is equivalent to the number of duplicate sets and since AutoMerge will merge a duplicate set of any size in a single operation, it is also equivalent to the number of AutoMerge operations needed to completely dedupe your data.
- > There are 1,172 (or 12.91%) Loser duplicates. This is equivalent to how many records would be deactivated assuming you AutoMerge all duplicate sets.

> Note: If you had to use built-in Merge Wizard instead of AutoMerge, you would have to merge duplicates 2 records at a time. Assuming you could identify these duplicates, it would take you 1,172 merge operations or 9 hours at 30 seconds a pop!

Analysis: 12/7/2018 8:47:48 PM/IL

Part 2: Optional tagging of some random duplicates

If – prior to filling out the secure online verification form, you have imported our AutoMerge managed solution into your CRM, then following the creation of the data quality report in #1, our Azure-based analysis server will tag of up to 100 sets of duplicates in your CRM. This way you can evaluate AutoMerge's full functionality end-to-end.

Note: Deleting our managed solution leaves nothing behind in your CRM except any merges you may have performed.
