

Velocity For Teams

Embrace company culture with One Unified communications platform

VELOCITY

Internal collaboration hub for your team

Velocity provides collaborative platform as intranet solution works on Microsoft Teams. With the increasing number of employees, links between colleagues are often loosely coupled. Pre-built widgets within Velocity intranet platform offers personalized web application to follow internal news & updates, monitor meeting room availabilities, see personal tasks along with menu, bus schedules and traffic information in order to increase awareness within workplace to strengthen corporate bonds and increase productivity within workplace.

Why Ege Kimya Need Velocity?

Employees feel that their human resources department not just recruiting new people and track performance but trying to make every employees' work much better and productive. It's very different to see human resources department as technology provider rather than IT.

Increased Productivity

- Collaboration hub for teamwork by chat based workplace

- **Modern look and feel with built-in themes**

Cross-Platform Management

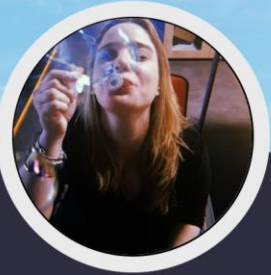

- Easy to use all widgets without leaving the main platform

- **Flexible management portal**

Multifunctional File Management

- Document sharing and support for external applications.

- **Instant deployment**

Tugce COTUK | PEAKUP
Marketing Strategist

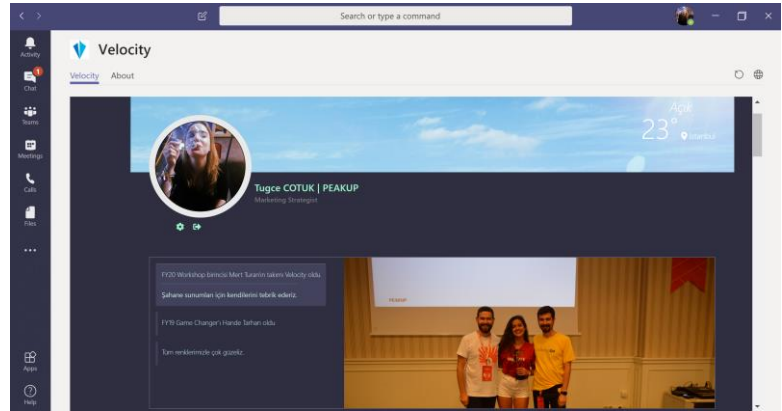

We use Angular 7 as a front end technology, Redis as cache layer, SendGrid as mailing platform above all core Teams platform resources and Azure backend.

Some of the mobile functionalities now restricted like tabs in mobile client. It is very promising, but we need to see more tabs functionalities in mobile client; Microsoft Forms and integrated website features should be used without leaving applications itself.

All the apps work on Teams as a native app and originally hosted on Azure Web App. They have an Angular 7 front-end. It's great to see that developers can work where they feel good from technology point of view, they don't need to adopt new platform and developer tools instead they build what they are used to

Why PEAKUP?

PEAKUP founded in 2012 as technology solutions provider in order to deliver value added services for information technologies purposes from managed infrastructure solutions to application development and support digital transformation of our customers. From the beginning until now PEAKUP creates network of 600+ customers with more than 600.000 employees across Europe, Middle East and Africa by delivering cutting edge technologies. Our technology focus and capabilities bring us sustainable achievements throughout the years.

VELOCITY

- Easy to use
- Up to date
- Customizable
