

Instant visibility to critical infrastructure health

EcoStruxure™ IT Expert: Efficient use of your time with cloud-based monitoring

IoT data center connectivity generates a wealth of raw data. With cloud-based services, you benefit from gaining insights into operational performance, lower mean-time-to-repair and maximizing ROI.

What is EcoStruxure™ IT Expert?

EcoStruxure™ IT Expert monitors and protects your critical equipment, providing 24/7 visibility through live data, smart alarming, and data-driven insights on the health of your connected assets. EcoStruxure™ IT Expert synthesizes performance and alarming data into proactive recommendations, and enables secure, wherever-you-go visibility and control.

Why customers use EcoStruxure™ IT Expert

- Visibility
- Managing assets from different vendors
- Comparisons

Proactive incident management

- Insights into the current and future state of your distributed environment
- Wherever-you-go visibility
- Recommendations on how to proactively handle incidents

180% return on investment

Vendor-neutral management

- Centralized management of all networked devices
- Firmware updates
- Configuration changes

-30% power consumers

Benchmarking

- Comparisons of devices performance against those of your peers around the world
- Seamless process
- Insights into key sensors and alarms

-25% downtime

With the EcoStruxure™ IT Expert mobile app, now my staff and I simply look at our phones for easy access to all the devices on our network. Alarms are consolidated according to relevance, enabling us to focus on the devices that are truly affected.

- Alan Silcott, Network Supervisor, Bainbridge Island School District
