

What is PowerGeoLog?

Add an extra layer of security to your CRM system by logging and tracking your user's frequent login locations.

It's becoming increasingly common for workforces to be spread out through the country, if not world. How do administrators know who's accessing their CRM? With PowerGeoLog, login IP addresses and geolocation (latitude/longitude) will be recorded within Dynamics CRM. Alert users when they login from an unfamiliar location and allow them to whitelist the location if it's a safe and common location. The PowerGeoLog notifications of new logins help users identify if their credentials have been compromised earlier. Within CRM, users can see the logins plotted on a map – [PowerMap](#) subscribers can add logins to their maps as well!

How Do I Get Started?

Try any of our PowerPack Add-ons FREE for 30 days with no risk and no pressure to commit! There are no setup fees, no long-term contracts (simply month to month), and no credit card information required! Click [here](#) to learn more.
