

Hogia Instant View

Instant View gives you a complete overview of the public transport network and delivers detailed information to passengers.

Use Hogia Instant View to gain an unparalleled overview of the public transport network and see detailed traffic data right down to vehicle level. This allows you to act quickly when unexpected situations arise, so that passengers can continue their journey as planned.

Well-functioning public transport is a complex and intricately balanced system. Small disruptions can have major knock-on effects, and it can be difficult to integrate isolated facts to obtain an accurate analysis of the situation. Hogia Instant View addresses these difficulties through an interface that shows the whole picture – in the form of a comprehensive map that gives the user a complete, real-time overview of the traffic situation. Instant View updates the vehicle's position every second and shows in colours where the individual vehicles are in relation to the timetable.

This overview makes it easier to see connections between different events that affect the traffic situation. It also helps you take appropriate measures based on facts that are updated in real time.

But Hogia Instant View doesn't only give you a complete, real-time overview of the public transport network – you can also zoom in and search for detailed information. With the help of intuitive navigation, you can filter the data so the map shows the exact information you need. This information might regard a specific route, service, stop or even a vehicle.

Hogia Instant View

Hogia Instant View is a platform-independent, cloud-based tool that requires very little prior knowledge thanks to its user-friendly interface. You will quickly learn to get maximum benefit from the tool. Instant View gives everyone in the organisation the same overview, thus minimising the risk of misunderstandings and wrong decisions.

Use Hogia Instant View to:

- ✓ Study an interactive map showing the public transport network in real time
- ✓ Monitor abnormalities in the transport network
- ✓ Zoom in to get detailed facts
- ✓ Use search, storage and filtering tools to find relevant information

HOGIA INSTANT VIEW

– part of Hogia's family of products for more efficient public transport

Hogia's Instant product family sets a new standard for the monitoring and management of public transport. These cloud-based platform-independent products can be mixed and matched to your needs, and together they create a complete tool under a common interface.

Instant Situation – *register events that affect public transport and gain a complete overview of the situation*

Instant Activate – *quickly activate alternative services when needed*

Instant View – *see a real-time overview of the public transport network*
