

Praelexis Constrata Machine Learning Platform

Innovative organizations incorporating data-driven decision-making often encounter the challenge that the prototyping, development and production environments of machine learning solutions lack coherence and consistency.

Constrata provides the synergy between all the components of the Machine Learning Model Life Cycle (MLMLC) and Software Development Life Cycle (SDLC). This managed platform enables organizations to become data driven decision makers by empowering their data scientists with relevant and easy to use tooling configurations. Constrata defines a best practice way of work that is proven in use and can easily be adopted by organizations to serve their strategic objectives.

Microsoft Azure secures the computational and information processing capabilities to facilitate the implementation of large Machine Learning models and to render the results at enterprise scale.
