

# Gym software

Prospectus 2018

## About software

Our software has been designed with main goal to **simplify and speed up** receptionist job, so your customers will be able to enter and exit gym more quickly. Important goal is also monitoring and controlling. It means that you as owner should have full control over your gym. Thanks to detailed statistics you can quickly find out what happened at your gym at specific day (sales for entries, memberships and goods...)

The idea to create this simple software arise from our first client in 2011 and from that time software development is fully oriented to our clients' requirements.

## Customers

Your customers are most important part of your business. We know it so we designed our software in a way that it will simplify interaction with your customers. Each customer has his/her **own profile** with basic contact details, profile picture and with list of memberships (tickets). Customer identification is based on **customer cards**. The cards can be contactless (RFID) or simple PVC cards with Bar code or QR-code. We are also able to provide card printing and help with the design. Card design is prepared individually so it can fully correspond with graphic manual of your gym.

## Tickets

Each gym is unique place and it has specific type of entries and memberships. Our software will provide you simple tool for creating unlimited number of entries and memberships. You are able to create **visits**, **minutes** or **time** based tickets. You can set multiple restrictions like age, allow entry only in specific days of week and specific time or add surcharge for extended time spent at the gym. For instance, students can have better price only in low traffic hours.

## Access control

If you would like to have full control over customers' visits we are offering possibility to connect our software with a turnstile. Turnstile will eliminate access to your gym only for customers with valid membership or with paid entry.

Access controller is also able to control doors with electrical lockers like dressing rooms, shower or other specialized rooms.

## Point of sale, stock management

It does not matter if you would like to sell to anonymous person or close bill of existing customer, you can always easily and quickly print bill. Thanks to connection to fiscal device all bill items are automatically sent to fiscal device. We have integrated all major producers of fiscal devices offered on Slovak market:

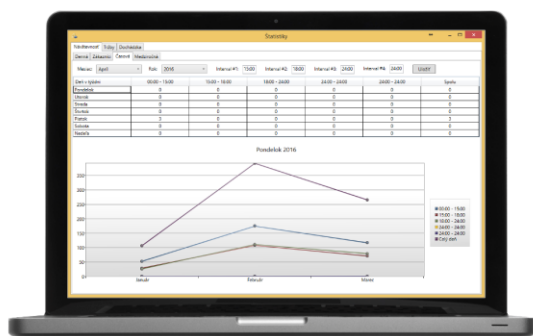

**Cashless sale** is more and more popular among customers. With our software, you can enjoy these cashless features:

- **Credit account:** Customer can prepay credit in any amount and use it later to buy goods or services (memberships, entries, etc.)
- **Invoices:** If you have long term memberships, you will most probably need generate and send invoices to customers. Once invoice is paid, you can easily prolong membership without payment, just choose 'invoice' as payment type.
- **Debit card:** In a cooperation with companies Bowa and First Data we are offering POS terminals, which are not involving banks, so you are able to minimize transaction costs. POS terminal will be connected with our software, so all payment information will be sent directly to the terminal. That will speed up process and eliminate receptionist mistakes. We are offering devices from Ingenico company:

**Warehouse** is closely connected to sale. Our software offers simple solution which help you create smooth flow of goods from supplier to your customers. All basic features like goods **receiving**, **dispensing** and **stocktaking** are included in the software. When you are selling goods to customers, warehouse quantity is automatically updated.

## Statistics

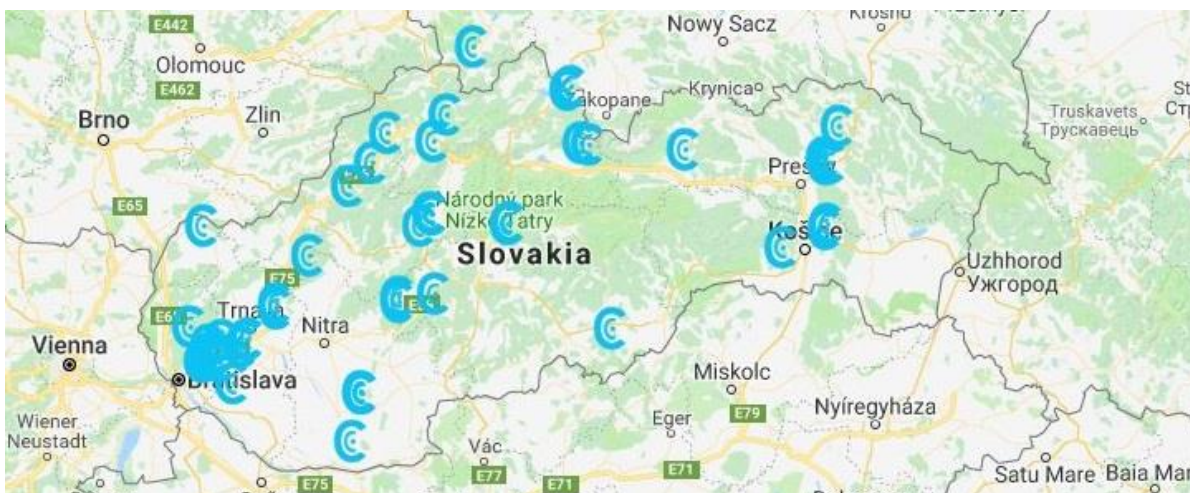

Statistics could be divided into two main groups:

- **Visits statistics** – Quick overview of daily, monthly and yearly visits, year on year comparison, occupancy...
- **Revenues statistics** – Financial overview about revenues (totals, categories, goods and services). Revenues development and year on year comparison in graphs...

## References

Currently we are operating on Slovak market. Primarily we are focusing on fitness and climbing gyms. The software is very flexible and so affordable even for small woman clubs and kids' centers.
