

Software Management

Our Software Management application is your one-stop shop for automating your billing process, while managing your products. Complete with flexible billing schedules, payment reminders, penalty calculations, instant invoice creation, and more, we've transformed tedious manual tasks into a time-saving machine for your entire team.

Business Simplified. 24/7 access on Microsoft Dynamics 365.

Flexible Billing Schedules

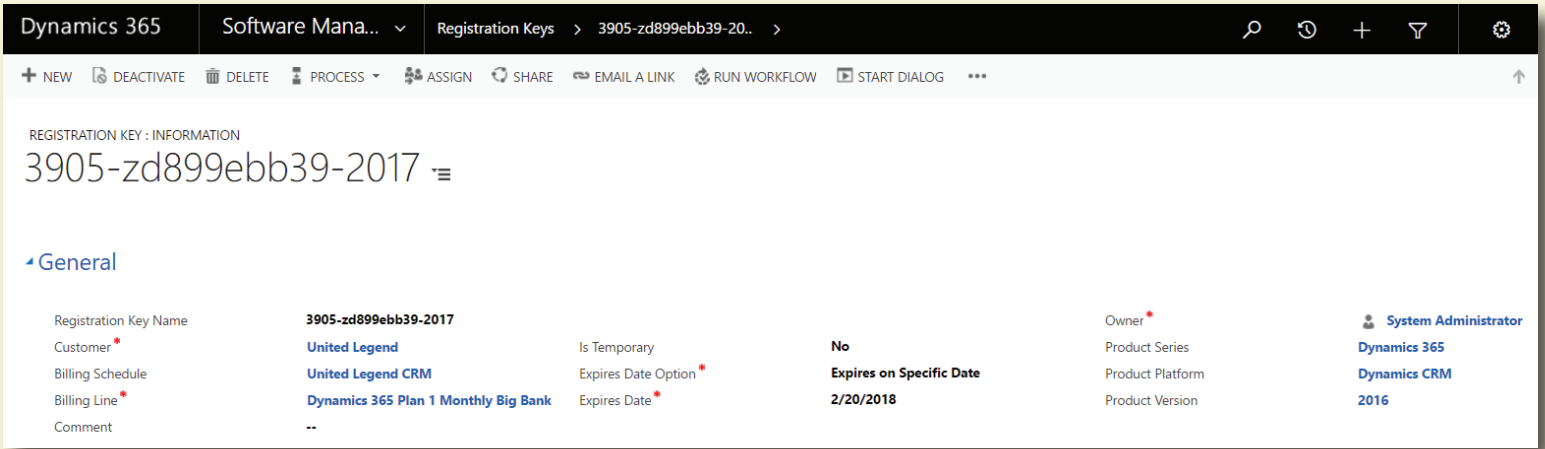

Flexible billing schedules let you bill annually, quarterly, monthly, or even daily. Whether you configure one or one hundred billing schedules, each can be fully customized based on common billing attributes such as overall length of the billing schedule, frequency of billing occurrence, inclusion of billing reminders, and even penalty calculations. Once your team has billing schedules in place, workflows handle the rest.

Instant Invoice Creation

Create invoices on demand with the click of a button, or automate the process by scheduling them to automatically generate for you! Save your team hundreds of hours of manual work by automating the entire invoicing process, from generation to sending the invoice to your customer.

Precise Product Licensing

Eliminate searching for product details when it comes time for billing. Software Management tracks product information such as product platform, series, version, and most importantly whether the customer is current on their maintenance directly in a single view.

Reminders Reimagined

Schedule automatic reminders to your customers regarding their upcoming or past due payments based on the needs of your business. Utilizing a set of Reminder Rules, you control when reminders are sent, the email templates used, and which contacts receive the messages.
