Multi-Entity Management for Microsoft Dynamics

Binary Stream

Simplify your intercompany processes and expand your ERP capabilities

Manage multiple entities in a single centralized instance within Microsoft Dynamics

Multi-Entity Management (MEM) streamlines intercompany processes and reporting by consolidating legal entities and master records. MEM provides a better view of your company data with real-time knowledge in order to help you make better business decisions. Designed with flexibility in mind, easily extend the capabilities of your existing ERP solution. Ensure the success of your business for today, tomorrow and the future with Multi-Entity Management by Binary Stream.

A scalable solution for all ERP challenges

Seamless integration with Microsoft Dynamics platforms allows for additional functions on a system you know and trust. Whether you have 20 or 2000 entities, our system reduces your ERP cost of ownership by improving workplace efficiency. As a result, complete month-end, quarterly, or year-end closes faster and be audit ready in the process.

> "We were able to grow from 55 entities to 239 while saving $126,000 per year by eliminating user inefficiencies and downtime obstacles."
>
> Bill Breitenbach IT Director, Signature Healthcare

Designed to meet all your industry needs

- Optimize your supply chain and standardize your inventory accounting processes.
- Consolidate and synchronize data across your entities.
- Create audit friendly reports for a clear financial view of your business.

The Multi-Entity Management Advantage

Increase productivity with the ability to consolidate and share master data records for customers, vendors, items, fixed assets, and more.

Manage the security access for each user per entity in order to ensure data privacy and prevent misuse of resources.

Save time by performing intercompany sales and purchasing transactions between legal entities without having to login to multiple instances.

Centralize the payables and receivables for any number of child/subsidiary entities to reduce potential errors from occurring during transactions.

Include multiple legal entities in a single transaction to establish a clear and accurate record of general ledger postings.
