Product Image Import

In the Retail Industry it is not unusual to add new products to product catalogues daily. Each product may have multiple variants, with each product and variant containing multiple images

Bluefort's Product Image Import is a powerful Dynamics solution, which enables the import of product and variant images.

With each product and product variant in a catalogue containing multiple images, the creation and maintenance of such images within the catalogue would be a very lengthy and tedious process.

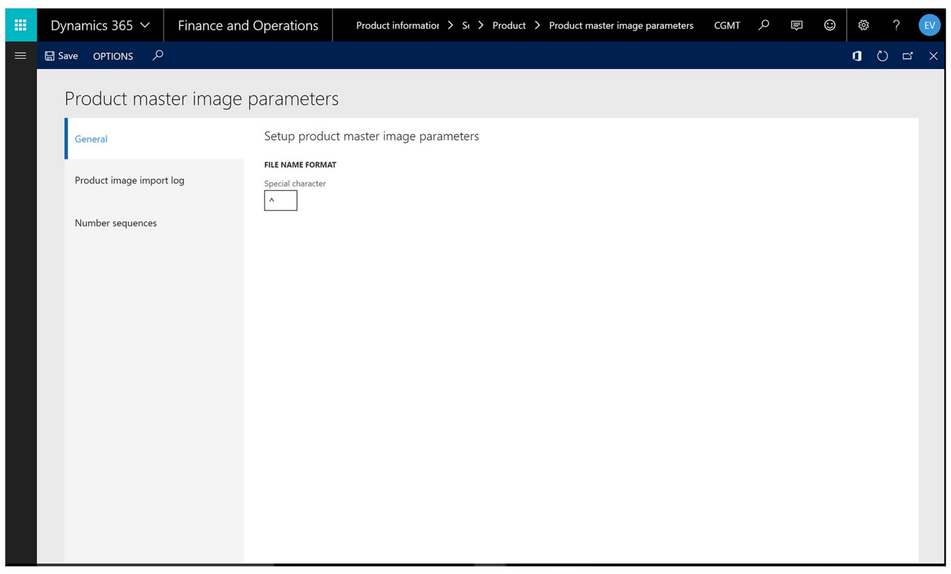
In Microsoft Dynamics 365 for Finance and Operations, thousands of images would need to be attached to each product and product variant manually, hence consuming considerably more time and money. By using Bluefort's Product Image Import solution, the catalogue manager can import thousands of product and variant images into the catalogue with one click of a button!

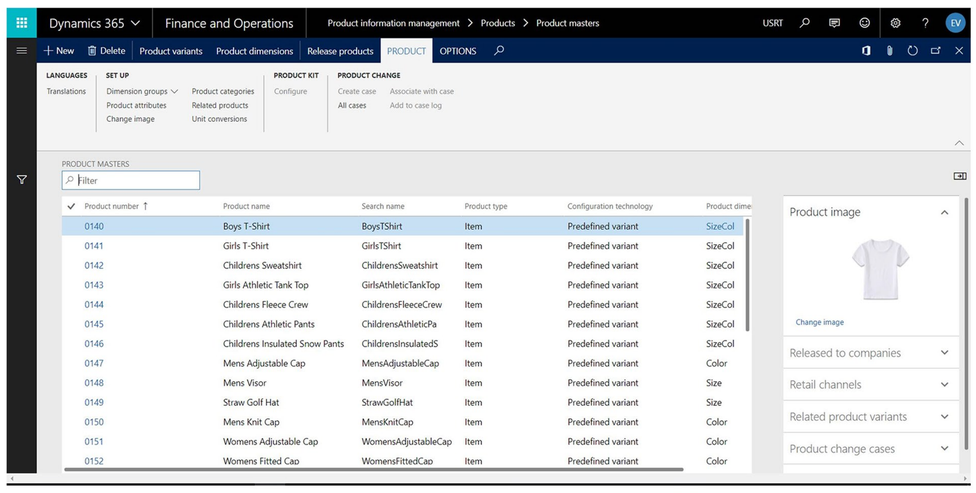
ADVANTAGES:

- Minimal setup, user friendly and easy to use
- Increases productivity and reduces costs
- Imports thousands of product and variant images with one click of a button
- Enables the catalogue manager to seamlessly maintain the product catalogue
- Full import traceability via a product import log

Product Image Import

With Product Image Import, add thousands of product images to your product catalog with one click of a button!





Product Image Import Features:

- Full integration with Microsoft's Dynamics 365 for Finance and Operations, as well as full integration with Microsoft's Dynamics 365 for Finance and Operations Product information management module.
- Provides very simple, user friendly setup for 1 click product image import.
- Import process takes into account both product master images, as well as, product variant images.
- Provides an extensive import log showing all successful and non-successful image imports, as well as meaningful messages to help troubleshoot when image imports fail.

Reduce costs and increase productivity with Bluefort's solution, Product Image Import!
