item life cycle
accelerator

**Improve life cycle management
of products within your Dynamics
system.**

Microsoft | Dynamics 365

Manufacturers and distributors with high volumes of SKUs need to manage, control, trace and structure data inputs and updates.

What is the Item Life Cycle accelerator by Prodware?

Item Life Cycle is a an out-of-the-box accelerator for **Dynamics 365 for Finance and Operations**, and helps manufacturers and distributors control their SKUs, manage changes and automate updates throughout the product range.

Why choose Item Life Cycle accelerator?

Manufacturers and distributors would like integrated functionality to achieve a controlled process and automatic updating of the product catalog with minimal manual intervention, resulting in accuracy and productivity: Workflow creation and management

- To organize and simplify this data input and to generate traceability of all data modifications and inputNegotiation approval and application
- For both the product and released product

Define life cycles

- Define item life cycles for products for all legal entities
- Define a different item life cycle by item group (e.g. service or manufacturing product)
- Manage a different status for each item life cycle family

Manage validation

- Set a checklist for each lifecycle status and each validating person
- Define validation rules & process by user or by group, for each status
- Display statistics (date, time used, etc.) of user validations by user or by item group

Improve change control

- Track & control item modifications status by status
- For each step, configure different controls on fields, user by user
- Automate the update blocks of purchase process, stock and sales according to the "lifecycle status"
