

Custom apps to run your business.

Copilot, swiftly meets the software needs of businesses with its safe and flexible no-code platform.

Why should you use Copilot for your business?

Because it allows you to create safe, fast-responding data applications that meet your needs using only your browser. Without coding difficulty.

Rapid application development

Develop apps easily by dragging and dropping without the hassle of coding.

Advanced role management

Each part of our applications can be managed for user-based and role-based authorization.

Smart reporting

Each piece of data that is created by your application is published in an integrated, meaningful and interactive way.

SOA and integration

Easy and complete integration with third-party business applications as an independent app.

No web page, there is native business app running on the cloud.

No annoying navigation times between pages.

No items that are not focused on the keyboard and non-standard keyboard interaction and shortcuts.

No public resources, there is your private cloud.

Private cloud hosting by definition is a single-tenant environment where the hardware, storage and network are dedicated to your business.

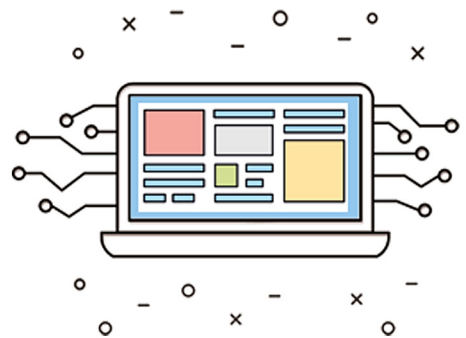

Security – Because private clouds are dedicated to your business, the hardware, data storage and network can be designed to assure high levels of security that cannot be accessed by other clients in the same data center.

Customizable – Hardware performance, network performance and storage performance can be specified and customized in the private cloud.

Hybrid Deployments – If a dedicated server is required to run a high speed database application, that hardware can be integrated into a private cloud, in effect, hybridizing the solution between virtual servers and dedicated servers.

This can't be achieved solely in a public cloud.

Custom Host – You can add custom domains to your business app. (appname.yourdomain.com)

Where is my data actually stored ?

54 regions worldwide, available in 140 countries

Utilize advanced technology in your business.

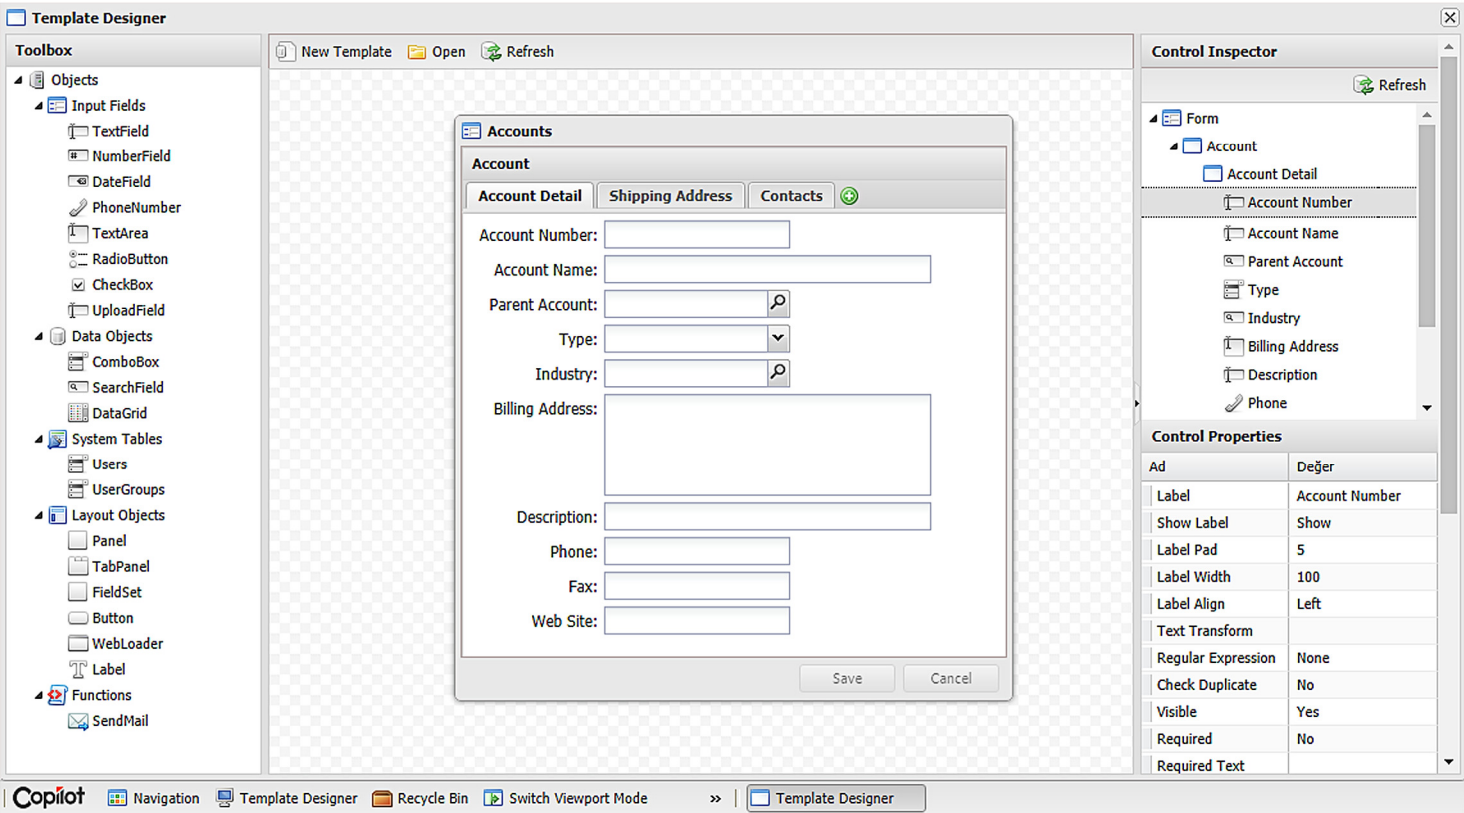

Work with the application that squarely meets your needs and enjoy consistently developed Copilot technologies that comes standard together with the interfaces developed just for you.

Drag-drop.

Develop apps easily by dragging and dropping without the hassle of coding.

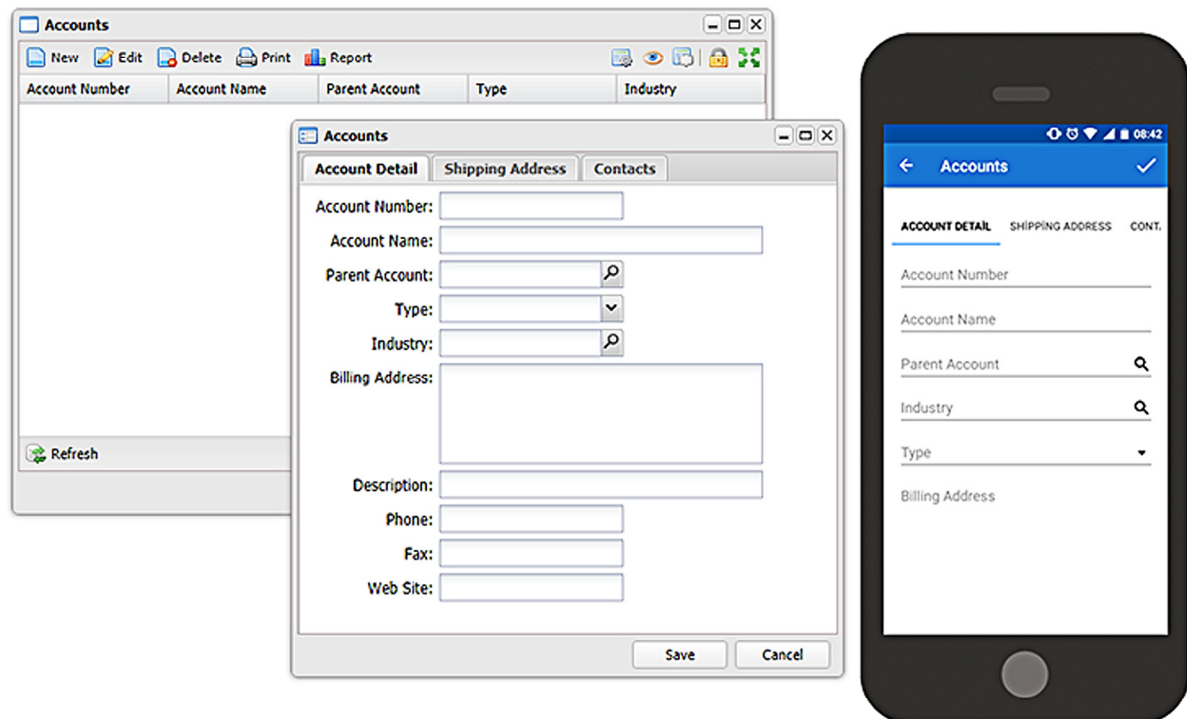

With Copilot, you will not face the problems that is common place in traditional software development.

Thanks to the smart approach we bring to software development.

Define permissions and rules.

Deploy in minutes after design.

You do not have to stop the system while deploying the interfaces you create using only your browser. Each solution developed with Copilot will work as a native mobile app without the need for additional development.

You can also do location based jobs.

5 minutes to create a typical application template in Copilot.

We'll Bring Your Vision to Life.

Copilot can help you turn your ideas into powerful, user-friendly applications.

Copilot is the ultimate solution for the perfect functioning and expansion of your business. Enjoy high efficiency and added value with less effort.

Remove obstacles in your business, achieve real results and achieve your objectives!

No code, there is Copilot!
