WAREHOUSE MANAGEMENT SYSTEMS

Control

A wms system is always a link in the total supply chain management and does not operate stand alone. CORAX wms looks for the optimum connection between the different links in the supply chain but also between its users and stakeholders.
CORAX wms makes this connection by:

1. Interfacing with other systems through the CORAX API;
2. An optimum connection with and between the people on the shop floor through our app;
3. Accessibility via any device anywhere in the world;
4. Through a user-friendly interface which is easy to understand for everybody;
5. By assisting you with our 24/7 support anywhere in the world.
CONTROL

EFFICIENCY

Efficiency

Money, resources and time are scarce. A good wms saves your company money. CORAX wms recognizes the importance of the efficient use of resources and people. CORAX wms produces savings by:

1. Offering flexible subscriptions on the basis of users instead of annual licenses;
2. Using smart algorithms which optimize the entire warehouse process;
3. Using barcode scanning and automatic identification;
4. Having access to the entire wms via the cloud, making the management of own hardware unnecessary;
5. Growing with your company.

Connection

A wms system is always a link in the total supply chain management and does not operate in a vacuum. CORAX wms looks for the optimum connection between the different links in the supply chain but also between its users and stakeholders. CORAX wms makes this connection by:
1. Interfacing with other systems through the CORAX API;
2. An optimum connection with and between the people on the shop floor through our app;
3. Accessibility via any device anywhere in the world;
4. Through a user-friendly interface which is easy to understand for everybody;
5. By assisting you with our 24/7 support anywhere in the world.

CONNECTION

INNOVATION

Innovation

Technological developments seem to follow each other ever faster. Robotization, virtual and augmented reality: all issues that will turn the world of warehouse automation upside down. CORAX wms wants to be a trendsetter in the developments and take our partners to the warehouse of the twenty-first century. CORAX wms innovates by:

1. Making use of cloud computing, a safe and accessible manner of data storage;
2. Making connection options with other systems easy (making interfacing with MFCS possible with a clear, graphical representation);
3. Guiding users on the shop floor with a user-friendly app;
4. Making management information available in a clear and simple manner where the users can compile the reports themselves (Power BI);
5. Investigating the possibilities of Virtual Reality (the HoloLens and the VR glasses of Microsoft, for example).
