Up to 90% Time Savings
Save time due to automated processes and option of freely choosing migration date and time

Cost Savings
save costs due to reduced manpower and minimal downtimes costs

User-friendliness
Intuitive operation of platform & implementation of change process on mobile device

---

Challenge

Administrative Overhead and Effort

Migrating a UEM/EMM platform requires a lot of time and administration effort (coordination, configuration, monitoring, troubleshooting)

Very susceptible to errors

Doing all migrations manually leaves users and administrators behind.

Solution: EBF Onboarder

Automated and less error-prone tool

EBF Onboarder for the migration and consolidation from one EMM system to Microsoft Intune

Largely automated reading and analysis of source system profiles and transfer to comparable profiles of the target system

Define and Plan Device Migrations without installing any components in your infrastructure.

When we first talked about executing Microsoft Intune, questions appeared rapidly on how to migrate Intune as smooth and fast as possible - especially for about 100.000 devices. Microsoft themselves recommended us using a product called INTUNE ONBOARDER from EBF for Microsoft Intune. From the very beginning our MDM administrator team was impressed by the products simplicity and flexibility.

- Varouj Oghali, Consultant Digital Transformation, Accenture
