

Real-time insight for effective production planning

## Challenges

Are you missing planning capabilities in Microsoft Dynamics 365 for Operations and considering, or using external planning tools?

## Enhance your Microsoft Dynamics 365

AXtension® Visual Planning for Production shows you precisely when orders are scheduled and how they influence confirmed orders or project activities. Rescheduling or optimizing the production of specific products becomes a piece of cake.

### Save time

See when orders are scheduled and how they influence confirmed orders or project activities. Immediately see the impact on clustered items and reschedule automatically based on progress. As a result, you will significantly reduce the time needed to process day-to-day planning challenges.

### Save money

Significantly reduce under or over utilization and increase your resource efficiency by visualizing resource availability by period for both planned production orders and production orders. This allows you to make the best strategic decisions and reduce costs accordingly.

### Only the best

Intuitive drilldown capabilities in combination with real time planning capabilities help you to make the best production plans. Everyone in the organization is able to see and understand the status of orders. Put the planner back in control after MRP has done its job according to your desired logic and make your planner go the extra mile.

### Fun to work with

Best web based Gantt available for Microsoft Dynamics 365, intuitively designed for you. Configure filters based on your specific needs. Rescheduling or optimizing the production plan becomes a piece of cake.

# How can you benefit

See how you can reach the full potential of enhancing your Microsoft Dynamics 365 apps with AXtension® Visual Planning for Production.

- **Multi select tasks for quick linking** | When selecting multiple operations across WBS structures, you can link these tasks without conflicts. This allows even quicker creation of links for large project structures.

- **Capacity overview** | Capacity demand vs. Available capacity in desired timeframes & buckets.

- **Master planning & Forecast** | Validate the impact of planned production orders before firming.
- **BOM & Formula requirements** | Show the availability of materials on production operation or job.
- **Scheduling based on progress** | All operations or jobs that have progress posted can be scheduled forward from now, based on the remaining time needed to complete the operation.

- **Production clusters** | Production jobs and operations can be clustered to optimize scheduling them as a group.
- **Scheduling Operations/Jobs** | Jobs and Operations can be selected in the desired sequence and connected to one another. Previous and next operations can be easily connected back to the selected operation.

## About AXtension

With over 380 customers, 800 global implementations and 100,000 users, companies worldwide have successfully enhanced their Microsoft Dynamics platform. AXtension® solutions are easy to implement, simple to use and 100% extensible.
