**Full OS/Client configuration supported** refers to the period in which both the Office client version and the Windows version are in support (including extended support). See [here](#) for more details.

**Service use supported** refers to the period in which Office 365 cloud service use (e.g., Exchange Online, SharePoint) will be supported for a given configuration. See [here](#) and [here](#) for more details.

**How to use this table (example):** I am running Office 2016 on Windows Server 2016. How long will my full configuration be supported by Microsoft? From the header row, I find that Office 2016 will leave extended support in October 2025. From the leftmost column, I find that Windows Server 2016 will reach end of support in January 2027. Where that row and column intersect, I find that my full configuration (including services like Exchange Online) will be supported until October 2023, at which point I will no longer be able to use Office 365 services within this configuration (due to the policy outlined here). However, my Office 2016 client applications will continue to be supported on WS2016 until October 2025, when Office 2016 leaves extended support.

*Beyond January 2020, Office 365 clients running on Windows 7 and Windows Server 2008/2008 R2 (with or without ESU) will receive Office 365 security updates, thru 2023.*

**Office 2016, 2013, and 2010 clients running on Windows 7 and Windows Server 2008 / 2008 R2 (with or without ESU) will continue to get monthly updates, through the end of the Office client’s lifecycle.**
