

# Surveil Hybrid Cloud Management Platform

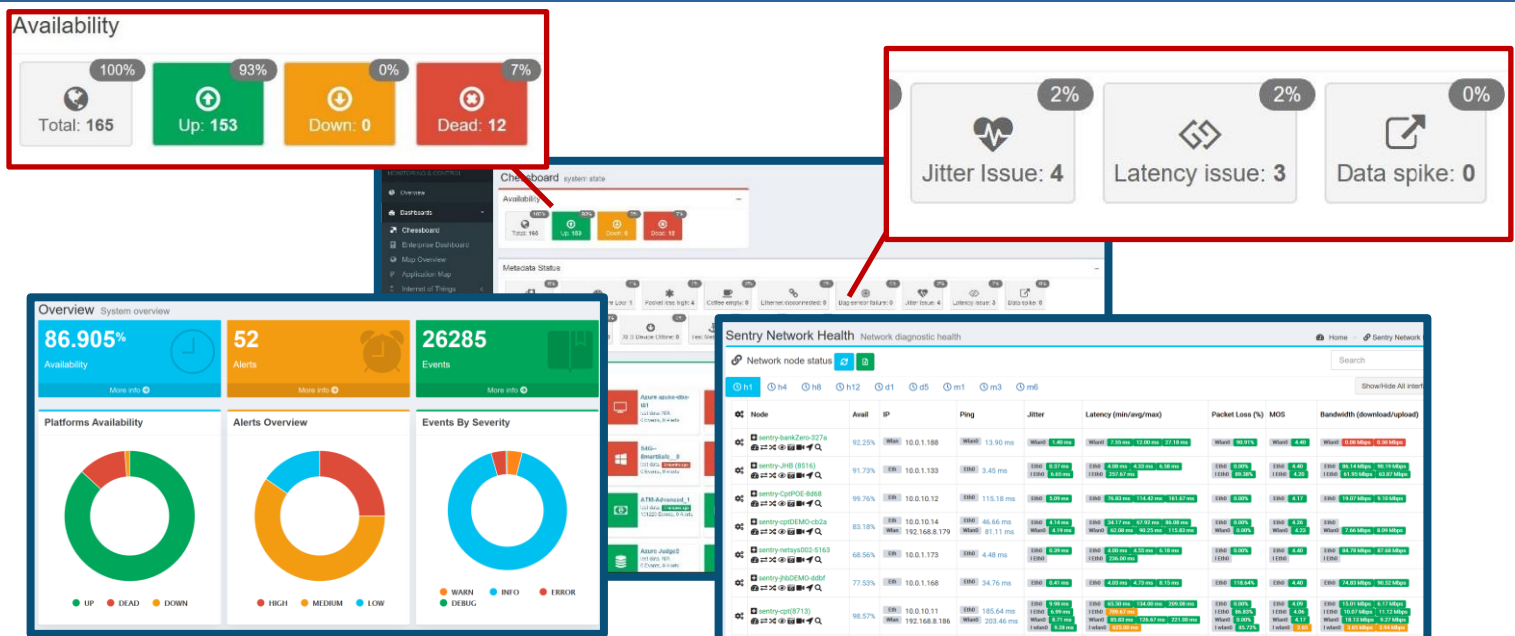

*Your complete Single Pane-of-Glass Hybrid Cloud Management solution*

Monitor and control any platform on your cloud-based and on-premise environments with banking-class security in a true single pane of glass. Surveil's agent or server-based plugins, along with its highly flexible server architecture, allows for maximum availability, ease-of-deployment and scalability.

Multi-tenanted and platform agnostic, the Surveil Hybrid Cloud Management Platform is complementary to any of your organisation's existing systems. Surveil simplifies the management of resources, such as applications, data infrastructure, licensing, content distribution and media management across cloud and on-premise. Surveil allows businesses to lower cost, improve efficiency and availability while enabling agility and innovation.

## Manage your entire hybrid network in a single pane of glass

Monitor your remote server temperature through your IoT device, manage your Azure Stack and troubleshoot your Skype for Business call quality issues. Do this all - and more - in a single pane of glass with the Surveil Hybrid Cloud Management Platform.

# Surveil Hybrid Cloud Management Platform

## Surveil HCM Platform Core Capabilities

- **Software Distribution**  
Deploys files, contents, patches or updates to the agent
- **Remote Operations on any platform**  
Can be configured via the server or via or outgoing ports only based agent architecture
- **Central Alerts**  
Trigger alerts from events or measurements, with the ability to auto-resolve
- **Centralised AI with Agent Learning Federation**  
Leverage Azure based Cognitive services supplied via a federation of learning on the IOT Edge with out Sentry agents – even when disconnected
- **Multi-Tenant, Role Based security**  
Configure access by groups, by roles and set security on detailed profiles – multi-tenant based architecture with banking class security
- **Platform Agnostic**
- **Compliance**  
All our platform features are enabled for auditing

## Customer Success Story

### Challenge:

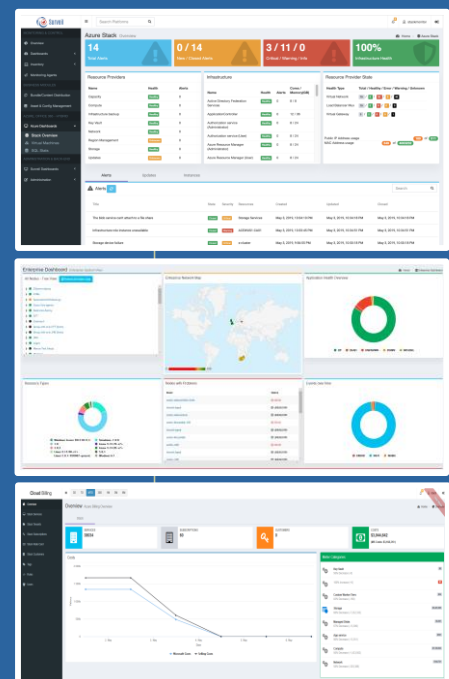

"As a Service Provider we lack the ability to see things visually with Azure Stack; if you don't have internet connection but still want to resell resources there isn't an easy mechanism to do that without requiring a lot of efforts or use the SCCM suite that requires a lot of infrastructure investment."

### Solution:

Full suite of capability in connected and disconnected Azure Stack

Monitoring of multiple Azure Stack regions, tenant workloads as well as well as core Azure Stack infrastructure, all in a single pane of glass

Detailed asset and costing management for their customer environments – Azure Stack or Azure Cloud

# Surveil Hybrid Cloud Management Platform Business Suite

## Surveil Core

Complete end-to-end management of your Azure and on-premise environments

## Azure and O365 Management

Single pane Azure-related management

## Azure Stack Management

Manage your Azure Stack from end-to-end

## Skype for Business/Teams

Monitoring of Skype for Business calls and quality of network

## Sentry - IoT

Monitor and control your environment and network health

## Asset & Configuration Management

Automated and custom Asset and configuration management tied into the monitoring components

## Media Management

Manage media distribution to any endpoint

## Content Distribution

Content distribution, patching and file management on any platform

## Azure Cloud Cost Management

Business based Cloud billing and management of Azure and Office 365 costs

## Hybrid Licensing Management

Fully manage cloud and on-premise based licenses

## Total Cost Of Ownership

Calculator tool for Surveil HCM Platform, cloud and on-premise services

## Service Book

Managing of tasks and service items to technicians
