

# Microsoft Certified: Azure Administrator Associate – Skills Measured

**This document contains the skills measured on the exams associated with this certification. It does not include any upcoming or recent changes that have been made to those skills. For more information about upcoming or recent changes, see the associated exam details page(s).**

## Manage Azure subscriptions and resources

### Manage Azure subscriptions

*May include but not limited to:*

- assign administrator permissions
- configure cost center quotas and tagging
- configure policies at Azure subscription level

### Analyze resource utilization and consumption

*May include but not limited to:*

- configure diagnostic settings on resources
- create baseline for resources
- create and test alerts
- analyze alerts across subscription
- analyze metrics across subscription
- create action groups and action rules
- monitor for unused resources
- monitor spend
- report on spend
- utilize log queries in Azure Monitor
- view alerts in Azure Monitor

### Manage resource groups

*May include but not limited to:*

- use Azure policies for resource groups
- configure resource locks
- configure resource policies
- implement and set tagging on resource groups
- move resources across resource groups

- remove resource groups

## **Managed role based access control (RBAC)**

*May include but not limited to:*

- create a custom role
- configure access to Azure resources by assigning roles
- configure management access to Azure
- troubleshoot RBAC
- implement RBAC policies
- assign RBAC Roles

## **Implement and manage storage**

### **Create and configure storage accounts**

*May include but not limited to:*

- configure network access to the storage account
- create and configure storage account
- generate shared access signature
- install and use Azure Storage Explorer
- manage access keys
- monitor activity log by using Monitor Logs
- implement Azure storage replication
- implement Azure AD Authentication

### **Import and export data to Azure**

*May include but not limited to:*

- create export from Azure job
- create import into Azure job
- use Azure Data Box
- configure and use Azure blob storage
- configure Azure content delivery network (CDN) endpoints
- use Azure Data Factory to transfer data to Azure

### **Configure Azure files**

*May include but not limited to:*

- create Azure file share

- create Azure File Sync service
- create Azure sync group
- troubleshoot Azure File Sync

## **Implement Azure backup**

*May include but not limited to:*

- configure and review backup reports
- perform backup operation
- create Recovery Services Vault
- create and configure backup policy
- perform a restore operation

## **Deploy and manage virtual machines (VMs)**

### **Create and configure a VM for Windows and Linux**

*May include but not limited to:*

- configure high availability
- configure monitoring, networking, storage, and virtual machine size
- deploy and configure scale sets

### **Automate deployment of VMs**

*May include but not limited to:*

- modify Azure Resource Manager (ARM) template
- configure location of new VMs
- configure VHD template
- deploy from template
- save a deployment as an ARM template
- deploy Windows and Linux VMs

### **Manage Azure VM**

*May include but not limited to:*

- add data discs
- add network interfaces
- automate configuration management by using PowerShell Desired State Configuration (DSC) and VM Agent by using custom script extensions
- manage VM sizes

- move VMs from one resource group to another
- redeploy VMs
- soft delete for Azure VMs

### **Manage VM backups**

*May include but not limited to:*

- configure VM backup
- define backup policies
- implement backup policies
- perform VM restore
- Azure Site Recovery

## **Configure and manage virtual networks**

### **Create connectivity between virtual networks**

*May include but not limited to:*

- create and configure VNET peering
- create and configure VNET to VNET connections
- verify virtual network connectivity
- create virtual network gateway

### **Implement and manage virtual networking**

*May include but not limited to:*

- configure private and public IP addresses, network routes, network interface, subnets, and virtual network

### **Configure name resolution**

*May include but not limited to:*

- configure Azure DNS
- configure custom DNS settings
- configure private and public DNS zones

### **Create and configure a Network Security Group (NSG)**

*May include but not limited to:*

- create security rules

- associate NSG to a subnet or network interface
- identify required ports
- evaluate effective security rules
- implement Application Security Groups

### **Implement Azure load balancer**

*May include but not limited to:*

- configure internal load balancer
- configure load balancing rules
- configure public load balancer
- troubleshoot load balancing

### **Monitor and troubleshoot virtual networking**

*May include but not limited to:*

- monitor on-premises connectivity
- use Network resource monitoring
- use Network Watcher
- troubleshoot external networking
- troubleshoot virtual network connectivity

### **Integrate on premises network with Azure virtual network**

*May include but not limited to:*

- create and configure Azure VPN Gateway
- create and configure site to site VPN
- configure Express Route
- verify on premises connectivity
- troubleshoot on premises connectivity with Azure
- use Azure network adapter

## **Manage identities**

### **Manage Azure Active Directory (AD)**

*May include but not limited to:*

- add custom domains
- Azure AD Join
- configure self-service password reset

- manage multiple directories

### **Manage Azure AD objects (users, groups, and devices)**

*May include but not limited to:*

- create users and groups
- manage user and group properties
- manage device settings
- perform bulk user updates
- manage guest accounts

### **Implement and manage hybrid identities**

*May include but not limited to:*

- install Azure AD Connect, including password hash and pass-through synchronization
- use Azure AD Connect to configure federation with on-premises Active Directory Domain Services (AD DS)
- manage Azure AD Connect
- manage password sync and password writeback

### **Implement multi-factor authentication (MFA)**

*May include but not limited to:*

- configure user accounts for MFA
- enable MFA by using bulk update
- configure fraud alerts
- configure bypass options
- configure Trusted IPs
- configure verification methods
