Autonumber Generator

Overview:

"This solution let user enable auto number for any entity in easy way with advance setup.

Features:

- Working for standard as well as custom entities
- Prefix and suffix are supported
- Auto number Setup can be done for the specific time duration.
- Block feature of No series
- Set length of No.

Autonumbering is a common requirement for most CRM Implementations to generate a Unique Reference Number for new records, so they can easily be tracked, and is also useful for integrations. Also, it enables admin to setup no. series financial year wise for any type of record.

Benefits:

- Admin can create no. series in Autonumber setup.
- It is a custom workflow-based set up so that the condition-based generation of auto-number can be possible.
- Admin can configure auto number functionality by selecting a particular entity name from the Autonumber setup form.
- Admin can have a preview of his desired auto number pattern by adding prefix, suffix, counter & length of number.
- Apart from this, the system can let Admin block auto number functionality and Admin can also set specific start to end date for this Autonumber setup.

How to use this solution

Get the solution from the App source and install it into your Dynamics 365 Instance.

One installation of the solution gets completed, you need to do the setup of no. series for respective entities on which auto number requires. Please make sure that, if you are enabling auto number for any entity, one custom field on that entity must be there in which we can capture the same.

Here you can create a new setup.

Go to Advance find and select the "Autonumber Configuration" entity.

After clicking on New Auto Number Configuration, the below form will appear and fill appropriate information as per requirements.

- First of all, the select entity where you want to implement auto-number feature from Entity List and then Name & Entity Name filed will be auto-updated as from selected entity from list.
- Prefix (Optional)
- Suffix (Optional)
- Length of No.: It can be set for sequential no. length (Prefix and suffix will not be considered in length)
- Counter: Starting no.
- Start Date: Starting date of this no. series
- End Date: Ending Date for this no. series
- Blocked: Yes/No option. For blocking no. series set it as "Yes"
