Indus Homes Limited

Case Study: Cost Monitoring & Control

IHL approached Systems Limited to implement a solution that would improve visibility and cost controls, implement pre-defined maintenance for classes of available assets. The company has been operating for over 60 years and has grown to achieve huge turnover out of textile materials and bears a strong technical, financial and personnel resource.

Customer Story

The company has a huge resource base and it faces barriers in control over maintenance related cost and processes. The company has been operating for over 60 years and produces huge amounts of yarn and cotton through its spinning and ginning mills annually.

Background

IHL opted for Systems Limited's solution Mainteers that will:

- Provide visibility and enable cost controls
- Enable asset management and process flow
- Facilitate overview of organizational performance through business intelligence dashboards

A 360-degree view of management and supply chain including product requisition and procure-to-pay cycle provides preventive maintenance.

Problem

IHL has been looking for a solution that can provide monitoring and control over cost and process related to maintenance management. Mainteers will enable timely replacement decisions.

Mainteers has the capability to solve a few crucial issues through its agility and flexibility. It will enable:

- Control over maintenance cost and process
- Improved visibility for maintenance process
- Unified process for emergency maintenance
- Process for pre defined maintenance
- Management reporting

Mainteers is the best match for IHL to fix their issues with maintenance of costs and assets. Improving visibility and managing costs is the need of the hour

Indus Homes Limited

Case Study: Cost Monitoring & Control

Solution

Mainteers enables to seamlessly manage preventive and corrective maintenance of deployed business assets

Business intelligence dashboards provide improved visibility that help management to make decisions regarding deployed business assets and replacement processes. This enables preventive and corrective maintenance. Cost management helps businesses flourish and grow.

Implementation

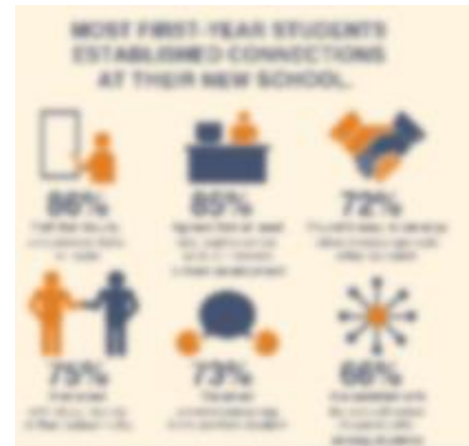

IHL relishes improved monitoring and control through visibility of cost and processes. Assignment of maintenance work order and monitoring enables better control. Verification of maintenance by third person before implementation ensures security and consumption of material related to work order.

Solution in Action

Mainteers is a flexible solution built with critical details of business intelligence modules. It enables the customers to deploy assets efficiently and maximize utility. This solution enables cost minimization and effective cross-department communication.

The solution is highly effective for huge entities like IHL where there is abundance of financial, personnel and technical resource.

Mainteers provides control and aids in monitoring on costs and processes related to maintenance management. It enables the management to make timely replacement decisions.

Systems Limited Mainteers

Case Study: Cost Monitoring & Control

Mainteers enables support for scheduled maintenance. The solution generates multi work order request approval workflows. Dynamic, role specific dashboards and reports indicate the active status of all activities going throughout the organizations. Detailed reports can be generated for the equipment, material and work orders in near-real time.

Results

Implementation of the solution to a huge entity like IHL has provided a number of benefits to them.

- Business intelligent dashboards allow monitoring and control which help save time and increase productivity
- Visibility of costs and processes related to maintenance allow IHL to manage finances and work flows
- Smooth preventive and corrective maintenance standard operating procedures
- Control on maintenance requests and the verification process allows inter-department collaboration
- Monitoring of assignments and work orders
- Management of work order relations with PR, PO and movement journal
- Consumption, resource deployment and product requisition according to work order
- Purchase of services with relation to particular work orders
