

FHIR CDR Integrates EHRs to Microsoft Teams For Secure Messaging, Care Coordination and Collaboration, and Telehealth

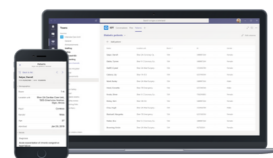

Seamless Integration With EHRs

- An HL7-FHIR compliant integration solution.
- Real-time clinical data integration to EHR systems like Meditech, EPIC, and Cerner using HL7/FHIR.
- Support for FHIR DSTU2 and STU3 versions via parsing of conformance statement.

Empower Clinicians With Easily Accessible Patient Data

- Create multiple patient lists within a single channel.
- View and sort information displayed about patients through configurable columns.
- Review and communicate urgent updates in real time from anywhere.

Enable Coordination of Patient Care In One Hub

- Connect instantly with clinical staff using secure messaging for critical decisions.
- Enable access to latest patient data from EHR systems in Microsoft Teams.
- Engage in meetings between clinicians or staff and across departments, units, or your entire healthcare network.

Secure communication and collaboration

- Built with HL7 and FHIR specifications for secure patient data access.
- Teams enables HIPAA compliance and is compliant with standards like HITRUST, SOC 1, SOC 2, GDPR, and more.
