

# Parent-Child Number Sequence for Dynamics F&O

## Offer Summary:

A tool which helps to record flexible numbering process and to fulfill the needs of creating any master or performing any transaction using various number series in the daily process.

## Offer Description:

Every organization has its own way of identifying their records based on the numbering systems they have decided to facilitate quick identification, search and retrieval of records. Most systems do not provide this feature natively. Businesses are required to choose between a simple sequence of automatically incrementing numbers or a customized solution.

Intech Systems have developed a tool which can ease the problem faced by the business and it can be integrated with Dynamics 365 F&O.
