

Govern 365

Make the most of your Office 365 Investment

Applying governance policies doesn't have to be painful... We here at Govern 365 have your back! Our team is passionately dedicated to ensuring that we simplify and automate this complicated process for you.

Avoid common governance pitfalls such as lack of automation, slow IT turnaround times, inadequate audit trails, proliferation and sprawl. Use Govern 365 to achieve the right balance between user empowerment and administrative control.

Provisioning is central to the governance process - it is where the enactment of your governance policies begins. You can institute fine-grained governance policies with minimal administrative burden through automation, pre-configured forms and templates.

Allow us to supercharge your governance plan with policies injected directly as new containers are created so you can effectively manage your entire Office 365 content lifecycle.

Get up and running quickly! Netwoven's experienced team is committed to helping you go live in a matter of days. Sign up for a 30-day free trial by emailing us at sales@govern365.com.

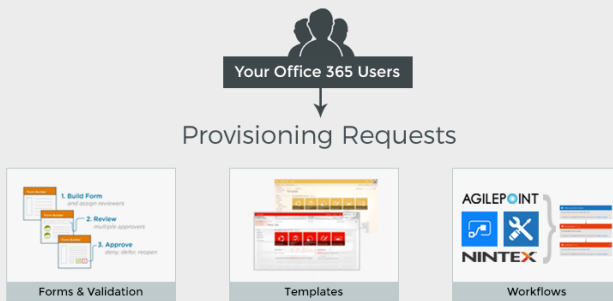

User Benefits

- You don't need the Microsoft Office 365 PhD - We help you pick the right tool for the job
- Don't wait for IT to manually create new containers - we can do it automatically and immediately
- Find information more quickly - We automatically archive or dispose of stale data
- Be empowered to more independently create templates so that there is less reliance on IT

Administrative Benefits

- Leave the overhead of gathering provisioning metadata & processing provisioning requests to us
- Gain valuable insights into your Office 365 environment with powerful inventory reports
- Take quick action on violations like containers without active owners, out of bounds external sharing and more...
- Streamline disposition with powerful rules & processes that work across workloads

Key Features

Seeded Content

Pre-seeded templates, provisioning forms, workflow process and more so that you can start at 85% of the way there.

Template Extraction

Create a new template by extraction from existing SharePoint sites with the click of a button.

Self Service Creation of Containers

Use templates to apply branding, web parts, information architecture, settings, permissions, and sharing constraints. SharePoint Sites, Teams, Outlook Groups and Yammer Groups are all supported.

Powerful and Customizable Provisioning Wizard and Forms

Not everyone has an Office 365 PhD. Help content owners select the right workload for the job and gather the necessary information through intuitive forms to ensure the ensuing content life cycle process can be automated and tuned.

Provisioning Process Workflows

Implement review, approval, training and other flows into your provisioning process.

Provisioning Directory

Track provisioning metadata in a provisioning directory (ex: site owners, department, cost center).

Content Inventory

Visualize your content inventory with powerful Power BI reports that support slicing and dicing your inventory data including custom provisioning metadata.

Smart Disposition

Use intelligent triggers to maximize the efficiency of your disposition process and take advantage of granular disposition activities to refine the process by which you retire your more complex O365 containers.

Business Outcome

Increase Team Productivity

Self-service and faster provisioning, consistent branding and user experience, better information findability all leading to higher team productivity, more collaboration and ultimately higher project ROI.

Boost IT Efficiency

Allow self-service site creation without giving up control. Build your provisioning approach from a proven template rather than a blank canvas. Minimize your IT overhead through use of a Managed product.

Reduce Risk

Make securing your information easy. Consistent application of security policies helps you restrict information access to the right employees and partners.
