Visual Map

Correlation & Entity Linking

Automatically find synonyms and related words during the search

Dynamic Classification

Automatically classify contents and complex searches based on dynamic categorization combining both rules- and machine learning/deep learning models

Iride Discovery

Building blocks

IRIDE Discovery – Main Capabilities

- Recognition of texts, tags, captions and 'hand written' notes in images
- Semantic analysis and indexing of contents
- Automatic Synonyms retrieval
- Concepts and Relations extraction
- Rule based inference on contents
- Named Entities recognition, disambiguation and linking
- Natural Language Search in any supported language (29+)
- Visual Knowledge Navigation with concept tree, entities and visual relation graph
- Automatic clustering

Takeaways

- Full analysis of all the source contents, both images and text
- Leverage on both Machine Learning and Rule Based approach for knowledge modeling and data classification
- Fast and easy Search of relevant documents in natural language
- Centralized virtual data layer enabling a Unified view of multiple sources via out of the box and custom built connectors
- Ready to go plug and play architecture that supports both on-premise and as-a-service deployment and licencing
- Multi language and Cross language queries
- Full set of APIs for easy integration into Third party and legacy systems
