

Dream of an easily customizable ERP
with simple operation and artificial intelligence?

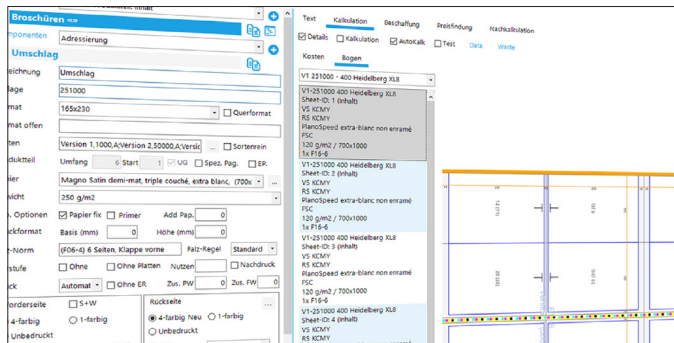

uTraxx.print

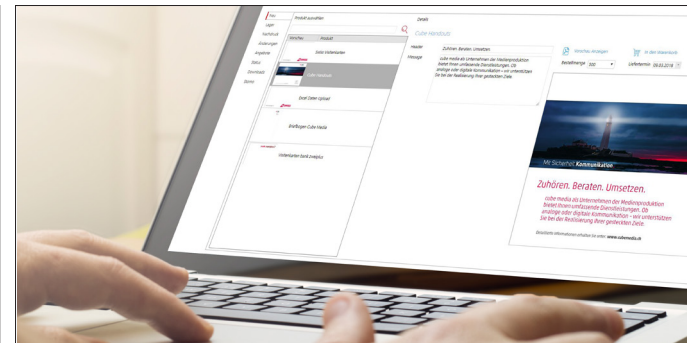

From craft to industrial production

Consistency is the magic word of digital transformation. With uTraxx 4.0 you are breaking new ground in terms of automation, standardization and accelerated processing of your print productions. The linking of upstream and downstream systems enables integrated processes without media breaks.

With the printing industry extension, the uTraxx.ERP becomes a fully automatic calculation system for print shops. The identification of intelligent production processes and the real-time cost comparison ensure optimal conditions.

uTraxx 4.0 includes a flexible webshop integrated in real-time from capture to production. All web-to-print and print-on-demand areas are supported: customization, mass personalization, reprints, fast entry with direct calculation, warehouse release and account management. Web shops of other manufacturers can be connected via interfaces.

Always one step ahead

Automatic calculation

The system proposes the best procedure for each edition by automatically launching and calculating the process paths, taking into account the available materials.

Delivery logistics

Products are stored as semi-finished or finished products. The delivery process is staggered immediately or by appointment and retrieval. You can manage any number of products or delivery addresses per order and deliveries can be triggered.

Production control

The production department constantly receives information about planning board, task management and JDF. The production progress is traceable in real time. The customer can be integrated into the process via web portals.

Costing / bill

The effective costs are collected via the company data collection and are transparent in the accounting. Deliveries can be grouped into collective invoices. All production, delivery and invoice data serve as the basis for freely definable statistics.
