

## Intelligent Workplace Offering

Our award-winning AI-powered intranet solution has been designed with three principles in mind:

*make it about people, make it intelligent, make it simple.*

We offer ongoing additional support to enable your company to realize the full potential of our Intelligent Workplace solution through tailored assessment, migration, development, training and adoption services.

### Discovery Support Includes:

#### Discovery

We'll discuss best practices for the intelligent digital workplace, and assess the scope and requirements for your solution.

#### Design

We'll help define your content strategy, information architecture and user pathways. From there, we'll create a design to visually reflect the outcomes that you aim to achieve.

#### Development

Our team will help build your design using the LiveTiles platform.

#### Training

We'll equip designers and content managers with the skills to maintain and improve your pages over time.

#### Review

Receive usability recommendations for your pages from our team of experts.

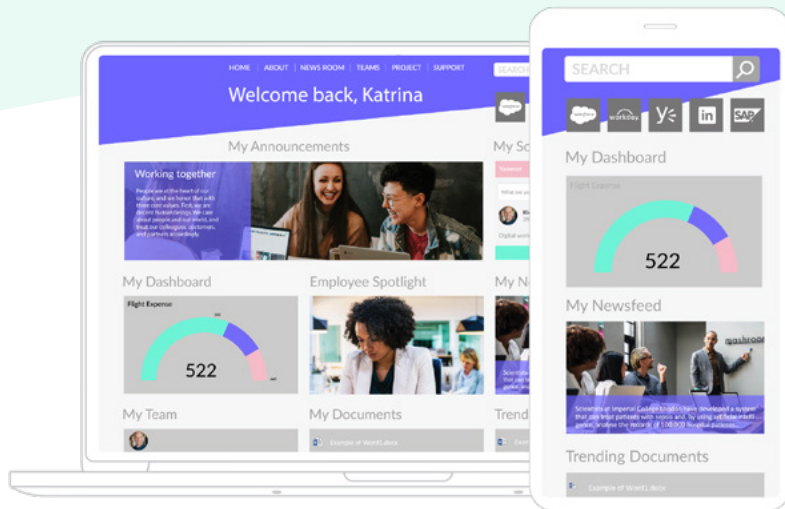

### Features:

- Page Designer
- Intelligence
- Bot Assistants
- People Directory
- Organizational Chart

### Add-on Options:

- Migration
- Additional Site Creation
- Chatbot Development
- User Experience Design

## Intuitive design tools

Create intelligent intranet sites on Office 365, Azure and SharePoint with our drag-and-drop interface.

- Design modern, mobile-friendly pages with preconfigured drag and drop tiles and a responsive page canvas
- Build compelling solutions that pull together legacy, current and future systems

## Boost productivity with bot assistants

Double down on productivity with custom built bots.

- Customize your bot's capabilities by adding abilities and modifying natural language parameters
- Deploy bots to multiple channels including Microsoft Teams, Outlook, web pages and more
- Central control over your organization's bots and overall governance by the Azure Bot Framework

## Design smarter with analytics

Evolve content and enhance the UI & UX based on data-driven decisions from user insights and analytics.

- Dig deep into granular user data with the ability to view analytics on users' departments, geolocations and device types to pinpoint where engagement can improve
- Test changes and measure the impact of page redesigns

## Know your people with a smart directory

Keep your employee directory up to date using AI and Bot technology.

- Automate the collection of employee profile information and power effective communication and collaboration
- Bring staff information together into an easy search experience in Office 365 and connect separate systems including your HRIS
