HUBSTREAM CONNECTS EVERYTHING TOGETHER

Hubstream is a data platform for tracking and prioritizing all of your investigation-related information. Our software organizes your data, links it together, and shows you where to focus your attention to solve crimes faster. It is used by government agencies, global brands and law enforcement worldwide.

HUBSTREAM MAKES YOU MORE PRODUCTIVE

Hubstream helps you coordinate with law firms, private investigators and other partners, and can even let the lawyers respond to tasks directly from their inboxes. With Hubstream, you get gorgeous interactive reports and the best part is, they are always automatically refreshed - no more messing around in Excel!

80/20

Studies have shown that for many crime types, around 80% of activity is caused by less than 20% of the offenders. Hubstream helps you to identify who they are.

HUBSTREAM MAKES YOUR TEAM MORE PROACTIVE

Your existing data services are important, but they should be augmented with robust investigative case management capabilities. Hubstream can link your existing online data streams with offline details such as emails, phone numbers and addresses to help you identify potential bad actors, even if they try to cover their tracks.

Hubstream offers the features we were looking for in a brand protection software platform, and what really impressed us was how extensively the software was customized to meet our specific requirements.
