cloud solutions

Trending: cloud technology

Cloud-based software for finance, treasury and IT is positioned to solve the key challenges that companies face today and in the future. Cloud solutions overcome the challenges caused by several applications and system environments, enabling finance departments to centralize financial processes and data across complex corporate structures. According to Gartner Inc., global investments in public cloud software will rise to \$221 billion in 2019 and a survey by KPMG in 2018 stated that 87% of companies already use or are planning to implement cloud solutions.

Is the cloud in your future, too?

Do a quick check: What main challenges does your department face?

If you can check any, cloud-based software could be a good fit for your finance, treasury and IT.

Challenges	Solutions
<input type="checkbox"/> Fraud risks	High security standards
<input type="checkbox"/> Lack of cash visibility	Centralized view and control
<input type="checkbox"/> Inefficient processes	Intelligent process automation to reduce manual workloads
<input type="checkbox"/> Compliance requirements	GDPR compliance
<input type="checkbox"/> Complex IT infrastructure	Easy integration with ERPs and legacy systems
<input type="checkbox"/> Outdated technology	State-of-the-art technology
<input type="checkbox"/> Long and inefficient IT projects	Fast implementation, quick & easy upgrades

Alevate solves your challenges

Alevate is our cloud-based B2B solution suite. It provides companies with an agile solution that fits into current and future IT infrastructure strategies. Whether deployed through a public, private, or hybrid cloud, Alevate provides the highest degree of solution flexibility while still delivering complete security and control of sensitive data.

Alevate solutions can be easily augmented with Serrala's Managed Services, a uniquely efficient microservices-based approach. You can leave back-office operations to our Serrala experts who perform operational processes and tasks on your behalf. This allows you to focus on your core business. Plus, you benefit from even greater agility and from the possibility to quickly adapt to changes, to add new capabilities, and scale complex processes globally to your individual requirements.

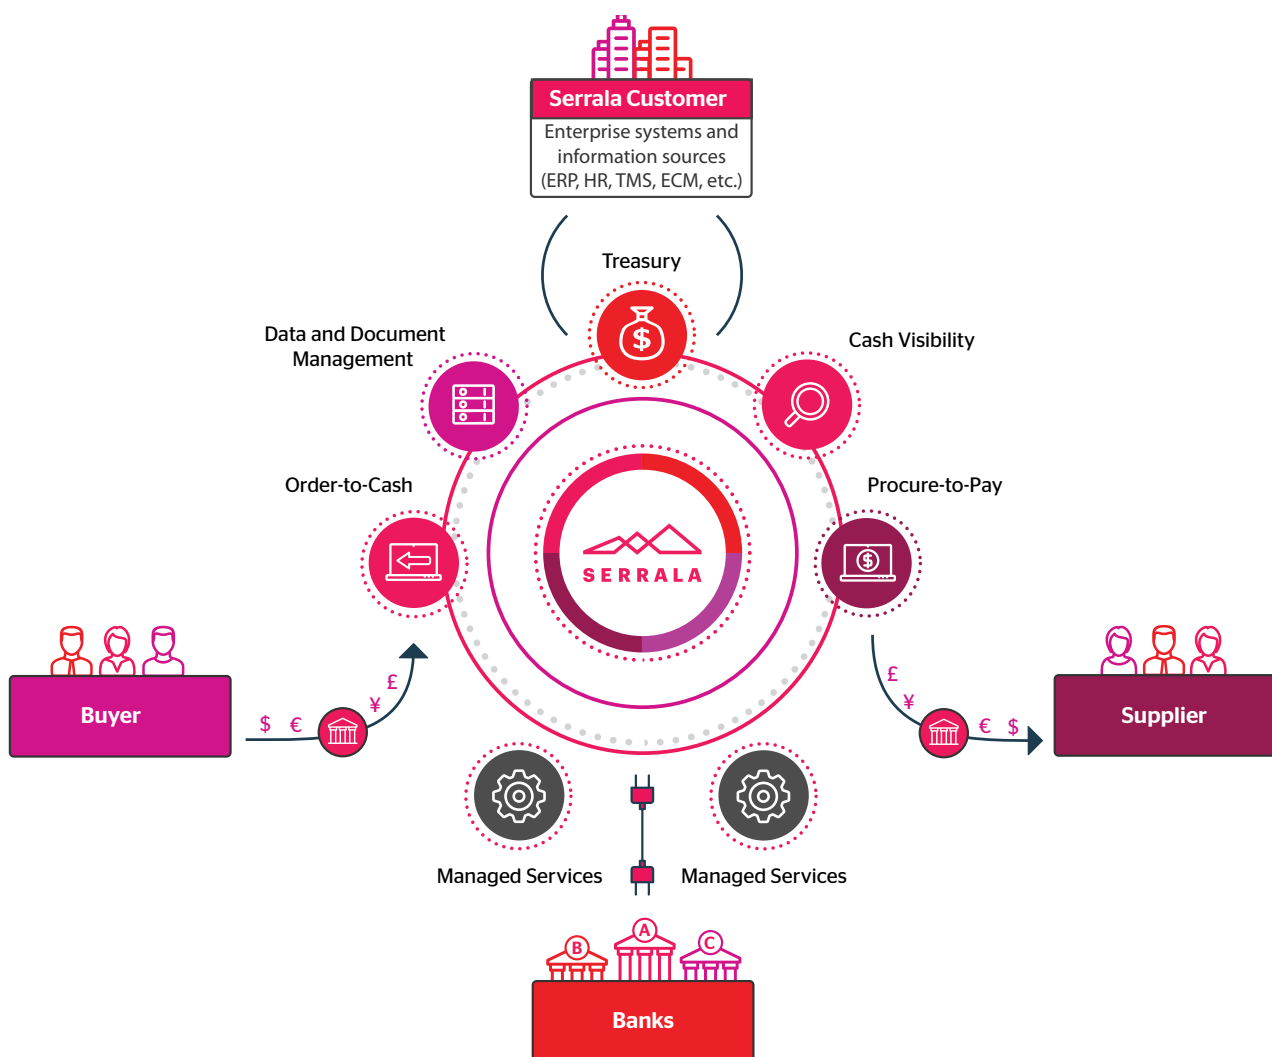

Alevate solutions are ideal for

- Achieving centralized visibility into and control over data
- Staying on top of technology trends and managing the move towards the cloud step-by-step with a scaled approach
- Moving fast and benefiting from a quick installation
- Controlling internal budget with a subscription model and scalable cloud-based software
- Automating your processes
- Maximizing security and compliance of your finance and treasury processes and associated data
- Smooth integration of new entities, banks, accounts, etc.

Alevate – optimizing your Universe of Payments

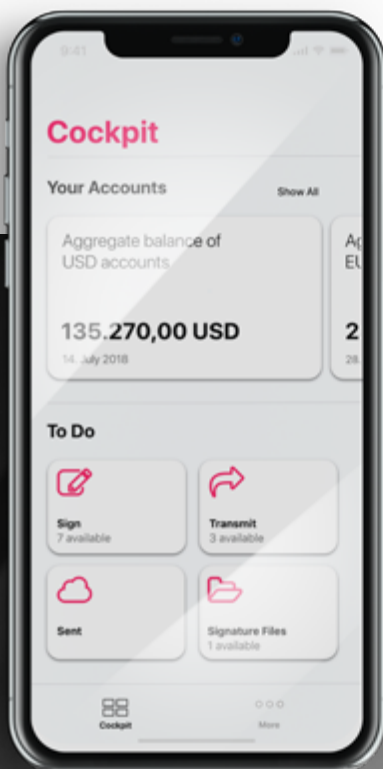

Alevate is the agile, adaptable and secure cloud solution suite empowering you to optimize your Universe of Payments. It is unique in that it covers all corporate finance processes such as order-to-cash, procure-to-pay, treasury, as well as data and document management.

Features & Highlights: what's in it for users?

- Fast and flexible integration of all your legal entities into one system
- Central transparency and control of cash flows across your enterprise
- Easy and secure connectivity with standardized APIs
- Out-of-the box solutions easily adapted to your individual needs
- Flexibility and scalability – public or private cloud, hybrid models
- Intelligent automation increasing process efficiency and security
- Best practices built on experiences of thousands of global customers
- Increased agility by leveraging managed services for specific process pain points
- Compliant with data privacy regulations such as GDPR
- Certified and proven vendor
- High usability with modern dashboard views
- Mobile and web access enabling 24/7/365 capability

83% of companies rate cloud security as good as or better than on-premise.

High usability with modern
dashboard views*

FAQ's:

How secure is the cloud?

As the KPMG Cloud Threat Report 2018 has revealed, over 83% of companies said that on-premise installations suffer as many as or more breaches than their cloud-based counterparts. The reason may be that cloud vendors have the specialized resources and experience to stay ahead of cyber threats. Companies benefit from best practices of which are incorporated into cloud solutions. In addition, security patches to protect software from cyber-attacks are much easier to deploy with cloud solutions.

When it comes to the cloud - what about data protection regulations like GDPR?

Such regulations are actually made for the digital era. To be sure that they are adhered to, look for certified providers - e.g. for ISO 27001 - that are compliant with privacy regulations.

What if I still have several systems running on-premise, will I still be able to use them?

Moving more and more business to the cloud is one of the main trends for corporates. Key financial processes will still remain on-premise for quite some time. But there is no contradiction: you can easily combine cloud solutions with on-premise systems. Using a hybrid cloud setting you can benefit from multi-ERP capabilities, a centralized view across all enterprise systems, secure end-to-end processes, and scalability to individual requirements.

Case Study: 100% data security in the cloud

A major savings bank with 450+ branches offering a portal to their clients is using Alevate to achieve secure processes for their entire banking set-up. Alevate enables them to store all data centrally within one database. With data protection mechanisms it is ensured that none of the individual branches can see the data of the other banks in the group. Client data are 100% secure and protected.
