

# JDA Transportation Management Cloud

## Optimize Your Performance, Accelerate Your Returns

Across hundreds of customer implementations, JDA Transportation Management System (TMS) has proven its value in synchronizing critical transportation process — enabling customers to deliver excellent service, while also controlling costs and maximizing their physical assets. In fact, based on the value delivered by this solution, JDA Software has been positioned by Gartner, Inc. in the Leaders quadrant of the “Magic Quadrant for Transportation Management Systems” in every year since 2012.

Today, JDA Transportation Management Cloud represents the easiest, fastest way to optimize and accelerate customers’ return on investment. JDA has specifically designed the TM Cloud offering to meet the real-world needs of its customers and the way they use this solution on a daily basis. By leveraging JDA’s years of experience — and features like user-friendly interfaces — businesses of all types can quickly launch JDA TMS, for fast performance results and a rapid ROI.

## Why Go It Alone? Rely on JDA, the Industry Leader

Many businesses are recognizing the value of a cloud computing approach for their JDA Transportation Management System solutions today — because of obvious advantages like processing speed and flexibility. With all its moving parts, as well as the ever-changing nature and speed of logistics, transportation is a natural match for an agile, robust cloud computing approach.

However, some businesses are opting to invest in their own cloud resources, or contracting with third-party providers who market commercial cloud services. The problem with both of these approaches? These cloud strategies fail to recognize the real way transportation and logistics systems work every day. They were not designed with transportation management in mind.

## ◆ JDA TM Cloud: Real Results

JDA’s customized Cloud approach for Transportation Management delivers these and other real-world benefits:

- **Rapid deployment.** Start your deployment in days and leverage expert teams who only implement JDA TM Cloud
- **Faster performance results.** Realize an immediate impact on customer service levels, on-time deliveries, capacity utilization and other key metrics
- **Rapid ROI.** Achieve a faster payback on software investments via cost controls that balance service with profitability
- **Minimize maintenance time and costs.** Turn the problems of IT infrastructure, software upgrades and daily maintenance over to the experts at JDA
- **Achieve ongoing improvements.** Capture the information and analytics needed to take corrective actions and make continuous performance improvements
- **Create a foundation for the Autonomous Supply Chain.** Access native integration to JDA’s next-generation artificial intelligence solutions for the cognitive supply chain

Backed by years of experience — and the industry’s leading transportation management solution — JDA is uniquely qualified to design a cloud offering that meets customers’ real needs for speed, flexibility and ease of use. All the critical information needed to accomplish high-priority tasks, identify constraints and optimize load planning is placed within easy reach via JDA TM Cloud, making it simple for managers to get the insights they need to make smart decisions that support profitability.

In addition, JDA TM Cloud eliminates everyday administrative tasks — such as software upgrades and system maintenance — that consume time and distract employees from more critical work. JDA’s experts work seamlessly and silently behind the scenes to ensure customers’ JDA TMS solutions are working optimally at all times. Customers save on IT infrastructure and human resources costs, amplifying their returns to an even greater degree.

### Best-in-Class TMS Capabilities — All Within Easy Reach

JDA Transportation Management System has proven its value as the industry’s best-in-class software for transportation management. JDA TM Cloud offers unparalleled capabilities to visualize and control every aspect of transportation and logistics — including dynamic hub routing, dynamic order splitting, advanced containerization, load splitting and consolidation, advanced carrier selection, and private and third-party fleet management. It also supports the mobile users at the heart of so many transportation and logistics teams today. JDA TM Cloud places these best practices within easy reach of every transportation management team.

Iterative planning capabilities enable transportation managers to make the best possible decisions in real-time — then flexibly adjust those decisions as conditions change. In response to emerging constraints, JDA TMS supports re-routing, carrier type changes, and other corrective actions that balance service and profitability. Via JDA TM Cloud, companies can quickly access powerful multi-site, multi-modal, inbound and outbound optimization capabilities that recognize and manage the real-time constraints and challenges of today’s complex transportation landscape.

JDA TM Cloud also supports the easy application of the sophisticated analytics available in JDA TMS — without the need to invest in specialized consultants or build internal expertise. Transportation planning teams can tap into the big data that’s available to them, gaining the multiple-stream, cross-mode, real-time insights they need to plan and replan strategically, based on what is actually happening with freight in real time — as well as what’s predicted to happen.

As one example, companies can significantly reduce shipment costs, while maximizing service, via best-in-class shipment execution. They can streamline communications with carriers, resolve exceptions, automate load tendering and broadcast tender capabilities by leveraging the real-time visibility delivered by the JDA TM Cloud.

With targeted business analytics that sift through data and generate critical insights, JDA TM Cloud turns daily information into common-sense action plans that deliver long-term strategic results.

**Using JDA, you can plan to deliver.**
