

# Don't Just Migrate to the Cloud, Reimagine Operations

The early days of cloud migration focused on building new and cloud-native applications. Early successes have led organizations to now focus on migrating existing, mission-critical workloads to improve the end-user experience, optimize costs, and create a more flexible and agile business.

As such, IT teams must learn how to build, operate, and support applications within this new paradigm. To effectively take advantage of the dynamic capabilities of the cloud, IT organizations need to make investments in modern technologies and embrace the cultural shift to DevOps.

## Collect & Harness Digital Signals

Collect data across hybrid environments and harness digital signals to take action and mitigate risks

## Service Visibility & Early Detection

Utilize machine learning and human data to find issues and automate the right action every time

## Team Agility

Transform and modernize your teams to take advantage of automation, agility, and flexibility

## Insights for Operations Health

Analytic insights help you measurably improve the operational health of your people, teams, and services

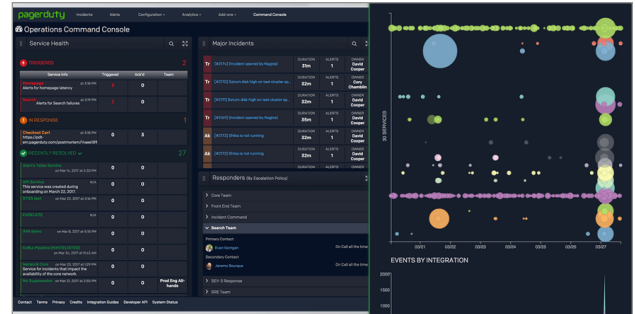

With the PagerDuty **Digital Operations Management** platform, organizations are able to ensure cloud migration projects move quickly, enable teams to adopt modern technologies and processes, decrease the impact of issues that occur throughout the migration lifecycle, and measurably and continuously improve their overall operations.

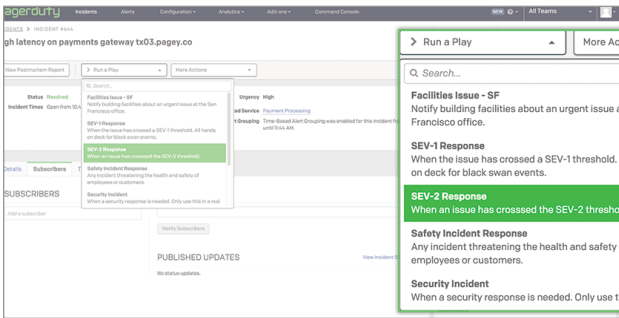

### Collect & Harness Digital Signals

PagerDuty has over 200 native integrations that allow you to automatically transform digital signals into actionable insights across both cloud and on-premises environments.

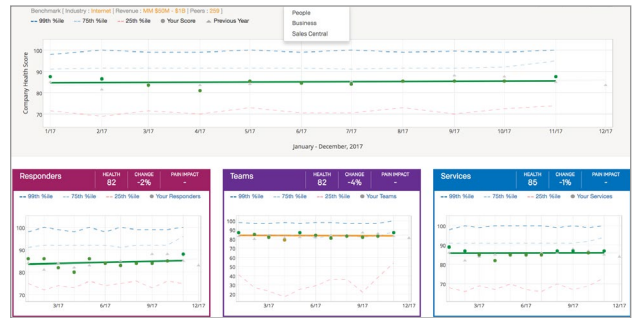

### Service Visibility & Early Detection

Understand service dependencies across your hybrid environment. Correlate data to reduce downtime and determine root cause before your project is delayed and customers are impacted.

### Team Agility

Transform and modernize teams to drive automation, agility, and flexibility inherent to cloud environments, modern tools, and DevOps culture.

### Insights for Operations Health

Gain insight into your team's health to retain your key employees while minimizing the business impact of your incidents. Provide complete visibility and take proactive action to optimize the health of your responders, teams, and services.
