

in:contrl

incontrl's API enables partners and customers to easily integrate into their platform and provide e-invoicing, payment and reconciliation services.

By adding incontrl's platform features to the services you provide, you make things easier for your customer and create an important factor that makes your company stand out from other service providers. Here's what our partners have to say about us:

Sending and receiving invoices are business critical processes for any company, and compromises cannot be made in their reliability. Integrating incontrl's e-invoicing as a part of discoverooms offering provides us with a transparent, scalable and cost-effective solution.

NIKOS ANAGNOSTOU, FOUNDER AND CEO, DISCOVEROOM P.C.

Provisioning portal

Our provisioning portal is the single interface to manage all aspects of provisioning your account and interactions with incontrl.io. Everything from subscription to your apps, connectors, webhooks and more. We aim to make it more convenient for you as it works around the clock!

RESTful API

Open APIs are part of incontrl's commitment to openness. The API has been designed to provide application developers the ability to embed ANY feature of the Platform easily into ANY application. Additionally we provide SDKs for the most popular languages, so you can focus on building your app instead of connecting the pieces.

Multiple connector options

To help you integrate your data and business processes we provide ready-to-go connectors for the best online payment service providers, banking APIs and Microsoft services and products. Sometimes though, you might want to call APIs, services, and systems that aren't available as prebuilt connectors. To support more tailored scenarios for your users' business and productivity needs, you can build custom connectors with their own triggers and actions.

Powered by Windows Azure

Security and Scalability can't be an afterthought. We have taken great care to provide a secure platform and features that scale with your business. With Windows Azure we are able to achieve nearly infinite scalability, virtually unlimited capacity, blazing performance and extremely quick provision times. Furthermore Windows Azure provides the most comprehensive compliance coverage and is the first cloud provider to contractually commit to the requirements of the General Data Protection Regulation (GDPR).

The reliability, efficiency and transparency of processes are extremely important to companies that handle large amounts of invoices. We offer an API for sending sales invoices, receiving purchase invoices and archiving invoices; with the API, you can take care of all services related to invoice forwarding, whether they involve e-invoice or paper invoices, businesses or consumers, in Greece or worldwide.
