

Predica Intranet Accelerator

Executive summary:

Capital groups and large businesses need an efficient system for sharing information and making the digital workplace more user-friendly. Specialists joining the companies expect a modern environment where they can perform their duties. One of the most important parts of this environment is intranet which forms a business communication center, allowing for quick content publication, directing content to relevant groups or informing about events.

Here we present our solution that allows for achieving these goals in a short time-frame, tailored to individual needs, based on Office 365 that releases new features and functionalities every month.

Description:

Predica Intranet Accelerator is a modern solution where our designers focused on several main features:

- Ease of use – after implementation content editors can work without input from IT and end-users do not require extensive training.
- Content targeting – every day we are inundated with a lot of unnecessary information. PIA allows for the content editor to target the information only to a specified recipient group.
- Multi-language – support for Polish and English is built-in. Automatic translation is available and articles can also be added in several language versions.
- Multimedia – the portal can be enhanced with images or video that editors can add easily, not having to worry about file sizes being too large or how they will look on smartphone or tablet displays.
- Mobile and tablet support (Responsive Web Design) – the application looks great, no matter which device or screen size a user has, retaining legibility and ease of navigation.
- Enterprise Social Network – people using the intranet would like to comment on or like an article or a news piece, much like they do on Facebook and other social networks. Our solution integrates natively with Yammer which is part of Office 365 to promote employee engagement through enabling social interaction.
- Office 365 integration – our solution is an element of a modern communication platform; together with Yammer (enterprise social network), Teams (project groups), Video Portal (video usage) and Skype, it forms a comprehensive solution.
- Ready to use modules – after deployment the customer can instantly use the following: News, Events (with personal calendar integration), Galleries, Address Book with an effective search tool, Organization structure, Department sites, Announcements, Canteens, Unified search.

Main benefits:

- Easy to use without input from IT
- Time-saving
- Intuitive
- Content targeting
- Element of culture change in organizations
- Works on PCs, Macs, tablets and smartphones

Duration and price:

6 weeks – rapid deployment: restyling the current solution to suit the customer's branding

3-9 months – full analysis with design and implementation tailored to business needs

Company size:

300+

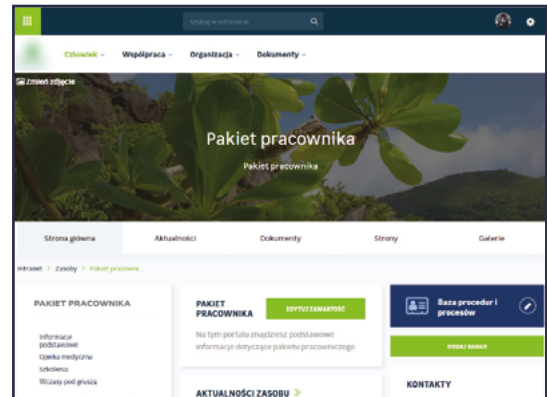

Industry:

All

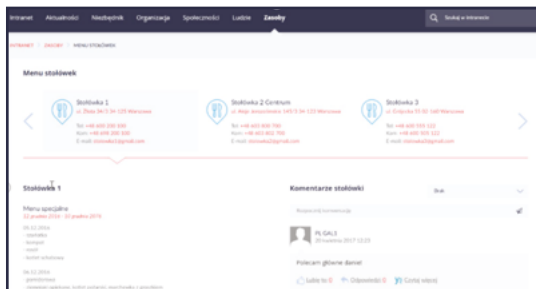

predica.
