Customer Success Stories

„We ran 8-10 story mapping workshops using the tool and documenting the stories as we progressed through the workshops.

The client loved the tool as did we. It was very effective for capturing the stories, quickly moving things around as priorities shifted or became more clear (e.g., capturing Minimum Viable Product).

We used the color coding feature extensively to help us and the client track which stories were :
- identified but not yet documented,
- partially or full documented but not yet agreed, and
- fully agreed by the client. It was effective at capturing the major workflow associated with the epic-level story, and then breaking those down into individual story cards.

We assessed a few other tools but found them to be too complicated and/or too expensive for what we needed. We wanted something simple and StoriesOnBoard fit our need."

What our customer say about us

„Without StoriesOnBoard, the projects would still get completed, however they may take longer and it may take even longer to arrive at what our customers really want"

„Ease of use and flexibility of the tool. We find this tool extremely important to kicking off new projects"

„There is virtually no learning curve to use this product"
