

# IMAGINECARE believes that health care can do better.

---

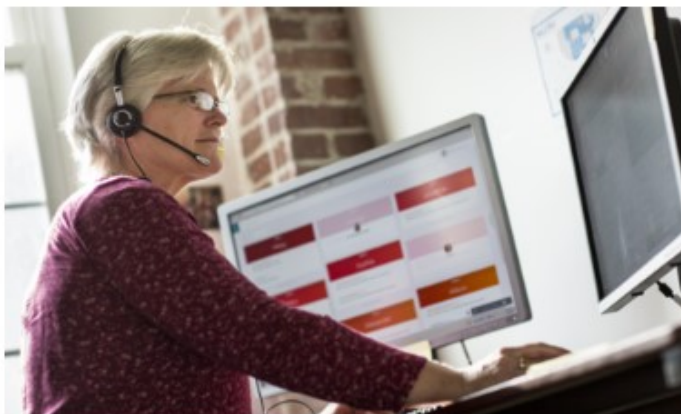

## HEALTH EXPERIENCE PLATFORM

### Bringing care directly to the consumer, on their own terms

An easy-to-use iOS mobile app, and Bluetooth-enabled remote sensing devices provide support for Activity, Steps, Sleep, Behavioral Health, as well as management of **Hypertension, CHF, COPD, and Diabetes.**

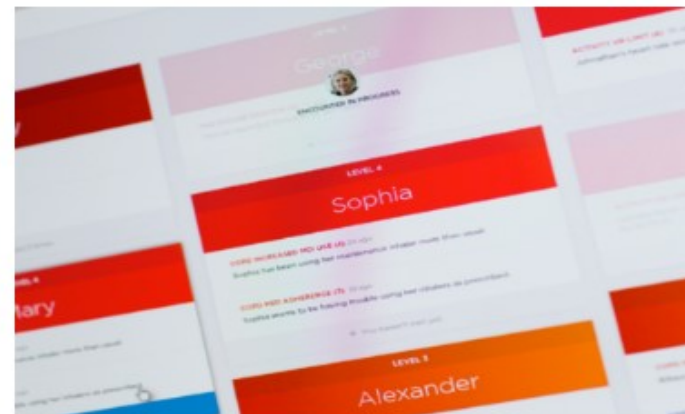

## HUMAN SUPPORT

### Providing right-size, right-time care

A trained team of **Health Navigators** offer technical support, health coaching, motivational interviewing, and general customer assistance. On-staff **Registered Nurses** provide professional care to resolve customers' needs over the phone or to help find external support.

## IMAGINECARE KNOWLEDGE

### Moving beyond current health care data limitations

By mapping health data through **custom-designed, evidence-based Care Pathways**, with EHR integration capabilities, ImagineCare leverages automation and predictive analysis to enhance the overall care experience—without letting them take the place of human support.
