Vision^{ng} PLM Pricing Options

Vision^{ng} PLM is a browser-based solution which is available for outright purchase or on a Software as a Service (SaaS) basis.

Pricing for both of these options includes a one-off cost for implementation and consultancy services to ensure that the solution reflects best practice processes and business requirements. This cost can vary significantly from an 'out of the box' solution for smaller, growing businesses with light touch configuration and training support, to a more consultative approach, with greater change management support and fuller configuration around specific business requirements.

Aside for implementation services and consultancy, pricing options are as follows:

Outright Purchase/Perpetual License:

- One-off software licenses based on the modules required to meet the business requirements.
- Annual maintenance, upgrades and support which is calculated as a percentage of software licenses.

Software as a Service (SaaS):

- Quarterly subscription fee covers access to the hosted services, upgrades and support. Reduces the requirement for customer infrastructure and IT expertise, with a service which maximises uptime, automatic upgrades and is scalable as the business grows.
