

Securing Your Open Source Components Has Never Been So Easy

Detection

Automatically detect all open source components in your software, every time you run your build, including all dependencies

Selection

Save your developers precious time with our selection tool. You'll be able to see all relevant information for each open source library, while searching online

Alerting

Get real-time alerts about security vulnerabilities, licensing risks, policy pitfalls, bugs and new version updates

Reporting

Generate comprehensive and accurate reports on open source components in your product, in one click

Why Choose us?

Accuracy

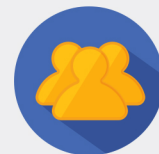

As the first open source security vulnerability detection tool on the market, WhiteSource has the most well-established database of known open source vulnerabilities. We are the only solution that provides full coverage with no false positives, misses or incompletes.

Complete SDLC Coverage

We secure and manage open source components throughout all stages of your software development life cycle (SDLC): from the selection stage, during development and even post deployment.

We can also integrate with all common build tools and CI servers.

All Team Support

We continuously track security vulnerabilities, licenses and software bugs in your open source components. This will ensure your security, engineering and legal teams will all enjoy the visibility, simplicity and accuracy of the WhiteSource solution.

It's All Covered

WhiteSource supports all common languages
