

Approved Contact, Hosted on Microsoft Azure, helps Workers Find Open Times & Schedule Meetings on Cross-Company Calendars From Teams

MICROSOFT AZURE SOLUTION BUILDER PROFILE: APPROVED CONTACT

In nearly every entity communication is accomplished through a combination of email and phone calls. Approved Contact created an Outlook add-in and Teams Calendar that allows users to view and schedule meetings with those outside of their company. Scheduling a meeting time that works for everyone is a pain! Approved Contact developed a solution to remove this time drain from the business world for good.

WHAT WE OFFER

Easily compare open times with people from different companies to find a meeting time that works for everyone. Approved Contact is available with Microsoft Office 365, Microsoft Exchange, and every major mail system. Add your calendar link to your email signature and your open times can be viewed and scheduled by anyone you email.

Schedule meetings with multiple parties easily. See everyone's available times and book your meeting on their calendars. You can text your personal calendar link to everyone you'd like to include in a meeting, and they can see your open times. Or you can simply schedule times when everyone's available directly from Teams.

Approved Contact provides a place to share files and conversations while you collaborate with other companies. Approved Contact includes chat, blog, and file-sharing features. Share files securely in encrypted sessions. Upload and download work with any file-sharing platform, including Microsoft OneDrive and Microsoft SharePoint.

Easily archive communication from Approved Contact into your CRM system. CRM integration allows for your chats, discussions, and files to be archived in Microsoft Dynamics or any other CRM system. Use your Microsoft Office account for easy sign-in. The Microsoft Outlook Add-in enables calendar availability to be seen directly in Office Outlook.

WHY APPROVED CONTACT?

"Approved Contact allows government entities to change their cultures of bureaucracy into one of open collaboration." – Dana Sale, President, Approved Contact

Microsoft Azure

Microsoft Azure is an open and flexible cloud platform that enables you to quickly build, deploy, scale, and manage applications across a global network of Microsoft data centers. You can build applications using multiple languages, tools, and frameworks.

KEY USE CASES

WEB APPLICATIONS

Build anything from lightweight websites to multi-tier cloud services that scale up as your traffic grows.

CLOUD STORAGE

Rely on geo-redundant cloud storage for backup, archiving, and disaster recovery.

BIG DATA & HPC

Get actionable insights from your data by taking advantage of a fully compatible enterprise-ready Hadoop service.

MOBILE

Accelerate your mobile app development by using a backend hosted on Microsoft Azure. Scale instantly as your install base grows.

MEDIA

Create, manage, and distribute media in the cloud – everything from encoding to content protection to streaming and analytics support.

FLEXIBLE APPLICATION MODEL

Microsoft Azure provides a rich set of application services, including SDKs, caching, messaging, and identity. You can write applications in .NET, PHP, Java, node.js, Python, Ruby, or using open REST protocols. This is all part of Microsoft's promise to let you build using any language, tool, or framework.

ALWAYS ON, ALWAYS HERE

Build resilient applications with automatic operating system and service updating, built-in network load balancing, and geo-redundant storage. Microsoft Azure also proudly delivers a 99.95% monthly SLA. You can rely on decades of experience in data center operations and trust that everything Microsoft Azure offers is backed by industry certifications for security and compliance.

DATA CENTER WITHOUT BOUNDARIES

Microsoft Azure makes it easy for you to integrate your on-premises IT environment with the public cloud. Migrate your virtual machines to Microsoft Azure without the need to convert them to a different format. Use the robust messaging and networking capabilities in Microsoft Azure to deliver hybrid solutions, and then manage your hybrid applications from a single console with Microsoft System Center.

GLOBAL REACH

With data centers around the globe, a massive investment in data center innovation, and a worldwide Content Delivery Network, you can build applications that provide the best experience for users, wherever they are.
