Finalist
Smart Cities
2019
LONDON

FINTECH OF THE YEAR
2019

Welfare management is
tricky: A lot of money is
spent, but not many are
fully happy

Traditional welfare management

Decentralized

- Many (institutions) responsible
- No two-way information flow

Bureaucratic

- Schemes, reports, manual applications
- Human error risk

Ineffective

- Costly administration
- Funds are wasted

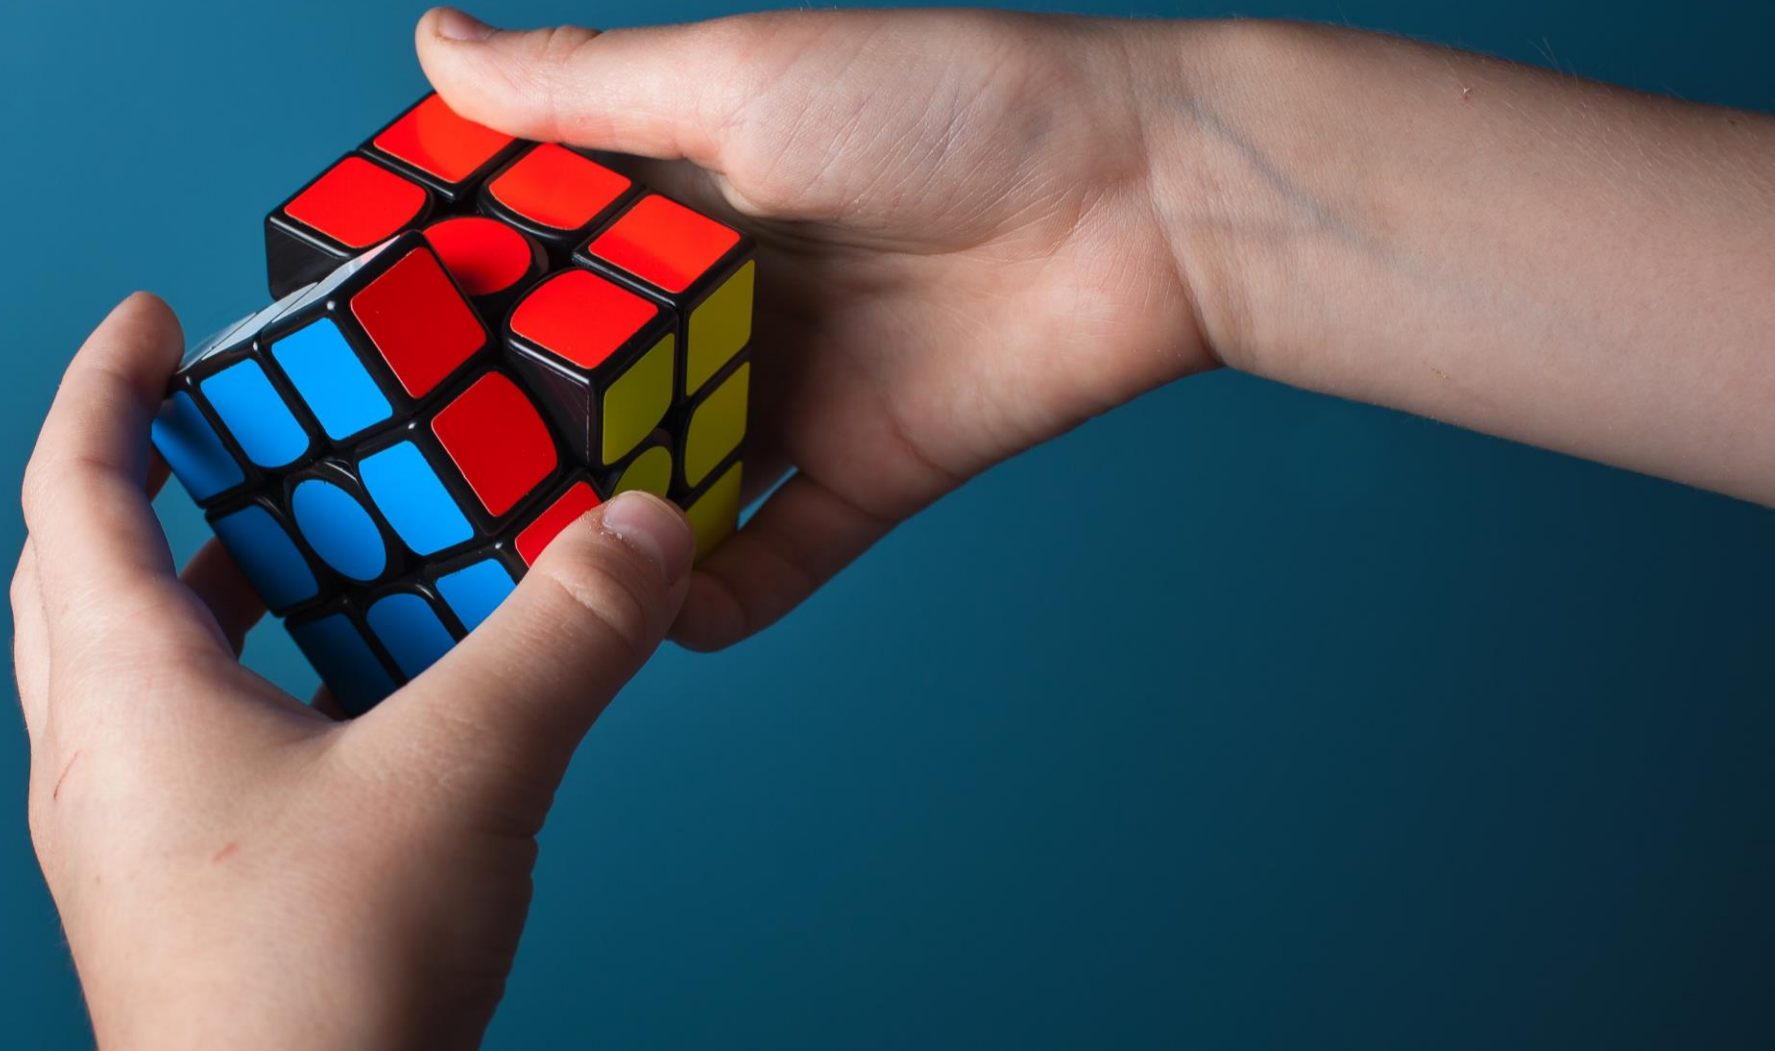

Impossible to audit

- No control over distribution
- Fraud and corruption risks

⋮ MOBILLY^{tx}

Welfare
management
system eliminating
fraud and satisfying
both beneficiaries
and donor needs

Benefits of the system

- Real time management with exact reports
- Creates transparency
- Reduces cost of administration
- Eliminates fraud
- Clients see the exact subsidy value
- Precisely targets beneficiaries
- Freedom to adjust recipient groups, services, limits

Privacy by design

- GDPR compliant
- Parental control
- Safer environment
- Increased security

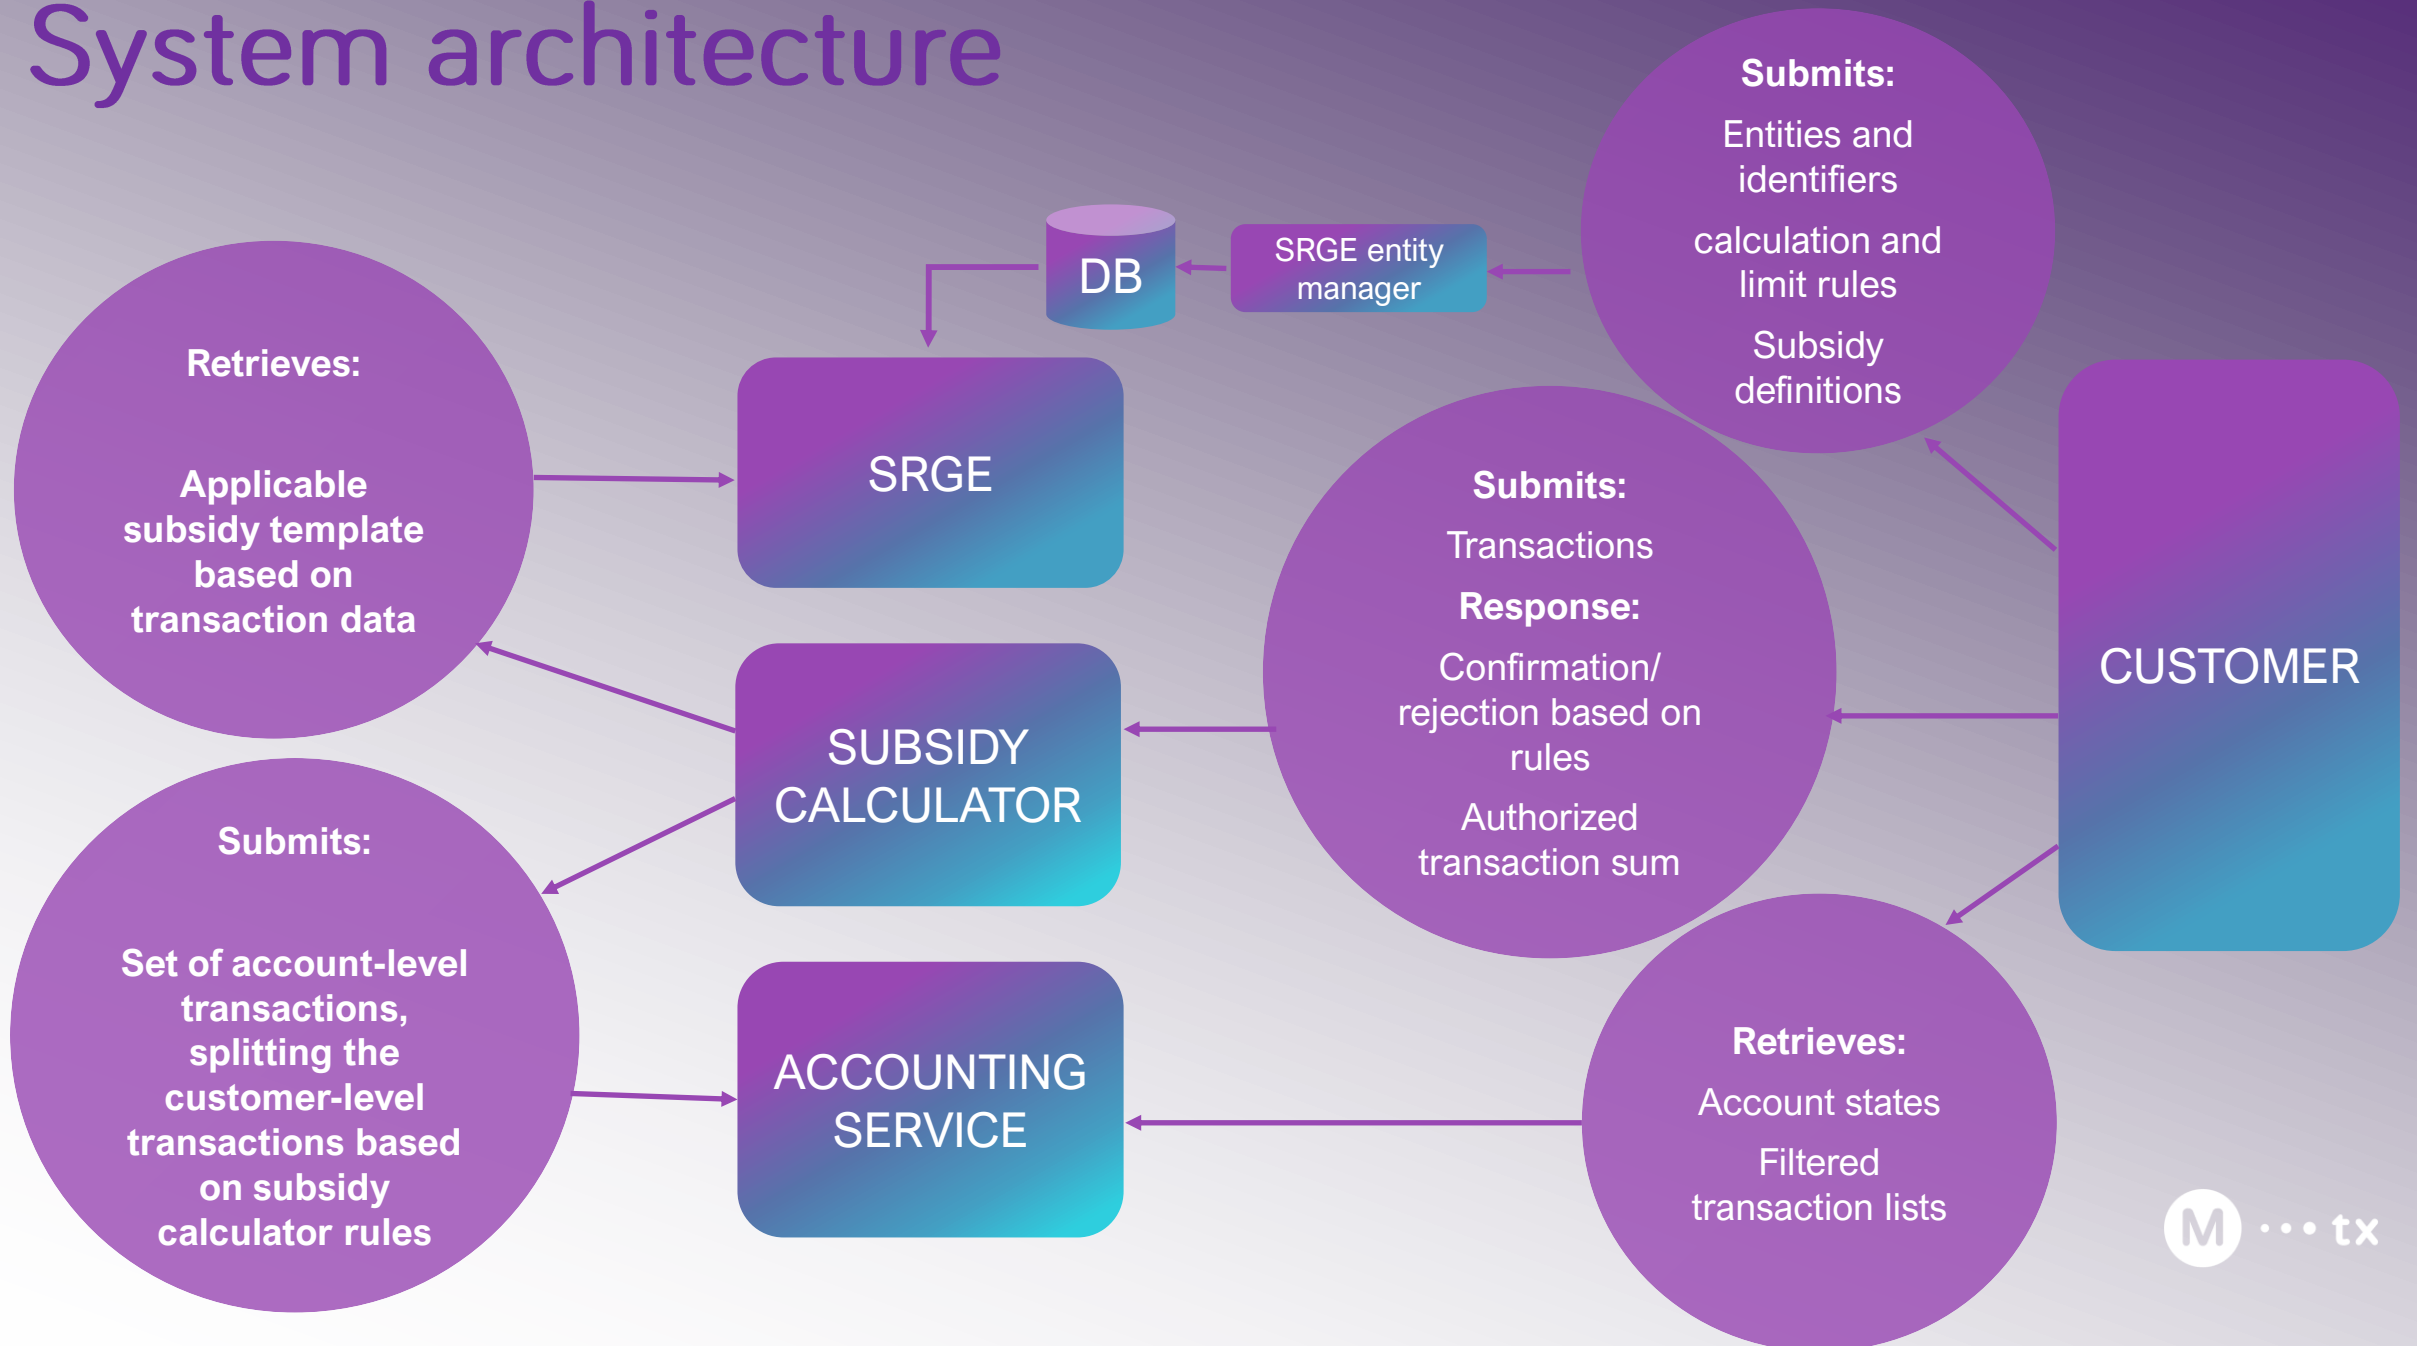

Sophisticated fraud control

- Compliant with welfare management
- Fraud check algorithm & monitoring
- Compliant with EU regulations

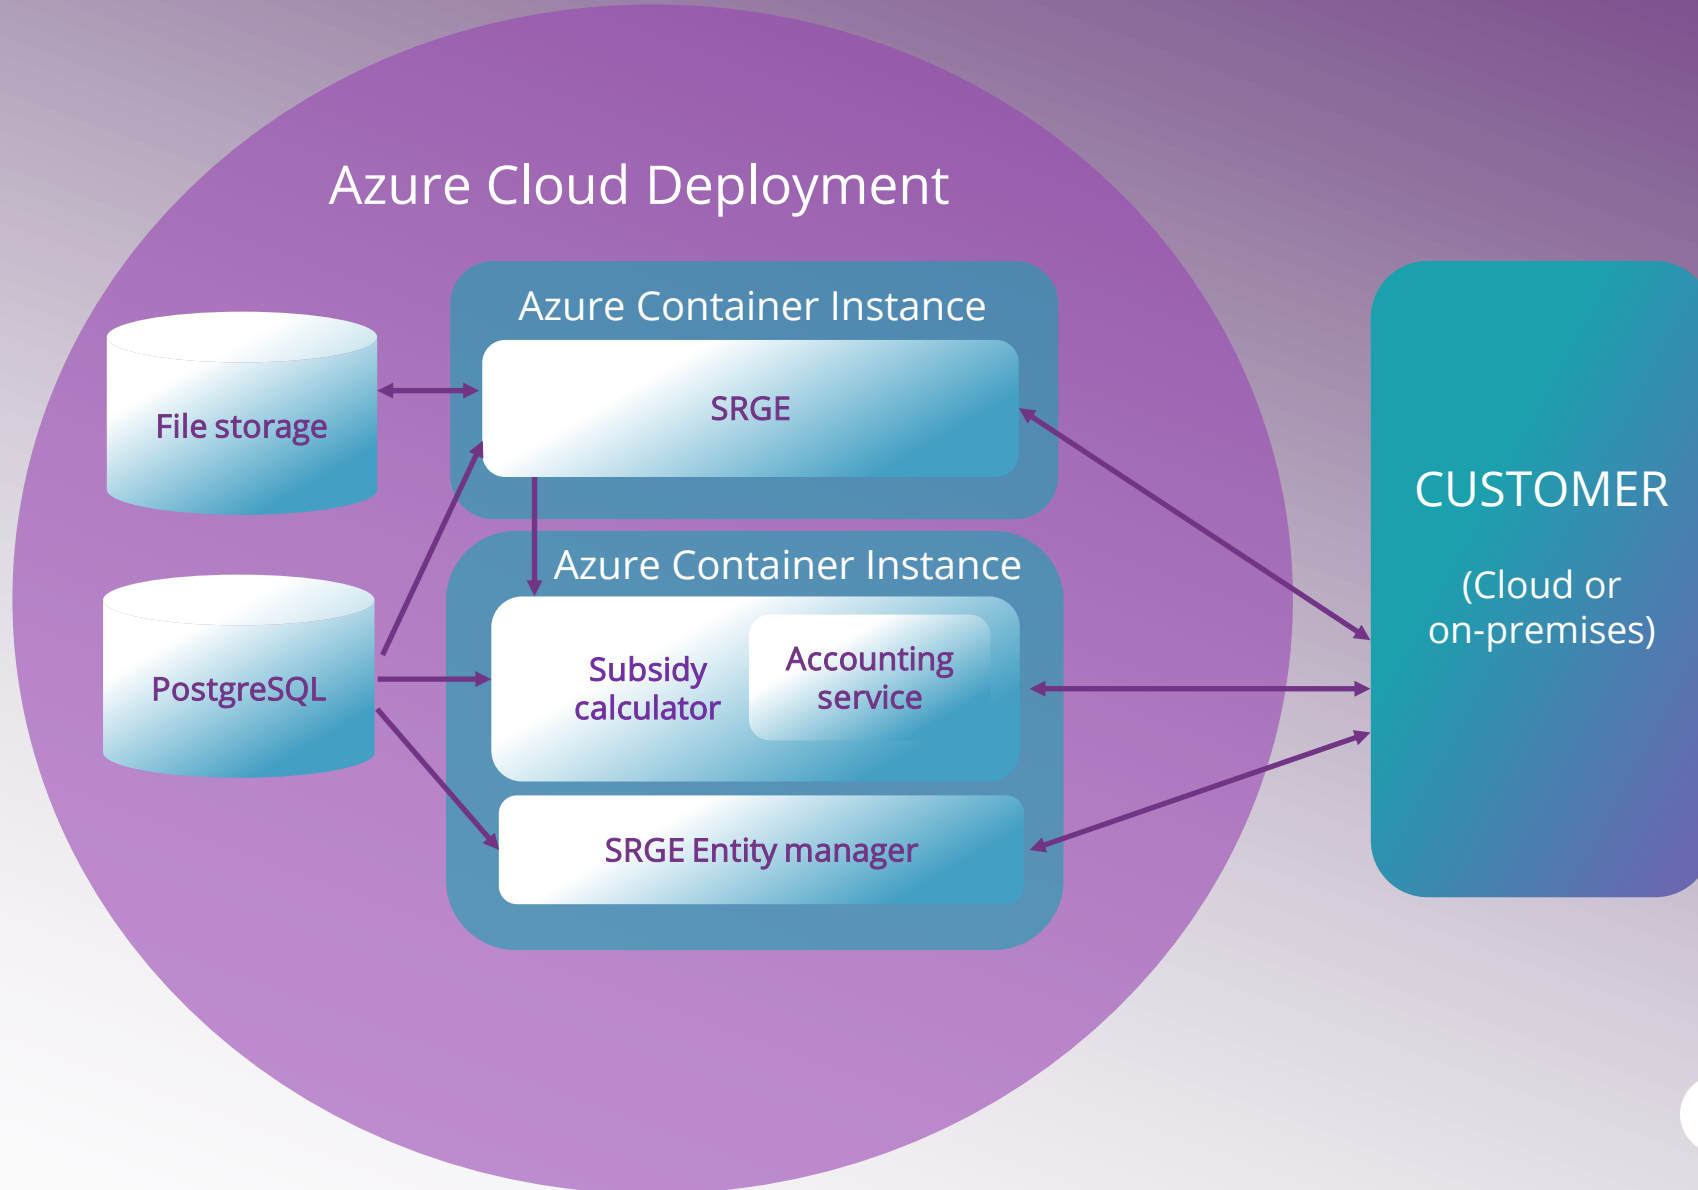

How
does it
work?

System architecture

Service component architecture

Use cases have prooved

30%

More benefit receivers
within the same budget

20%

Savings of the budget for
users of the system

Let's make
welfare
management
better together!
