# Agrivi Farm Management

## Digital Agricultural Transformation for Farmers

Farmers have to make data-driven decisions and improve their business performance to manage crop production efficiently and produce more food. That is a why farmers should rely on the help of farm management software – a central place for tracking all farming activities and have a good base for making the right decisions.

## What is Agrivi?

Agrivi is a farm management software that helps growers establish sustainable farm management practices and reach profitable crop production. By providing farmers with knowledge about farming best practices and with real-time insight into farming performance, Agrivi lets farmers make data-driven decisions which in turn increases their overall yields.

### Why customers love Agrivi:

- A centralized place for all farm data

- Real-time insight into produce quantity and risk potential

- A simple overview of farm KPIs in one click and easy-get reports in one click

## Risk Management & Mitigation

- Timely alarms for weather and pest and diseases

- Real-time overview of fields and risks

- Integrated communication with farmers

**Reducing Crop Loss**

## Complete Farm Traceability

- Know everything about the produce you source

- Ensuring compliance with standards

- Traceability from planting till harvest

**Improving Yield Efficiency**

## Simple Finance Management

- Tracking all invoices in a single place

- Customers and vendors saved with all information

- Cash flow easily monitored at any time

**Increasing a Profit Margin**

"Agrivi provides a complete production overview and based on that we can calculate are we profitable or not. I have to point out one thing that is especially useful for our farm—the possibility to set alarms for machinery whose registration is due or is malfunctioning. This helps us manage machinery usage more efficiently and allows us to stay up-to-date with all equipment documentation." – Stipe Sakic, Farm Manager, Vita-Vi

# How Agrivi Farm Management Software works, to achieve business benefits

## Your grower data all in one place

- Database of growers, their fields and crops
- Real-time insight into farmers' field activities, season plan and reports
- Aggregated analytics

## Integration with your existing systems

- 2-way integration via Agrivi API
- Integration with 3rd-party software (ERP, accounting, etc.)
- Integration with 3rd-party hardware (IoT, precision farming, etc.)

## Premium security and support

- Dedicated Azure cloud instance
- Guaranteed uptime and top notch data security
- Premium support and a dedicated account manager

**Our promise to you**

Health of the supply chain is the health of every company. Boost your farmer network with a solution designed to increase farmer network performance.

**Key benefits**

Reach sustainability by getting a deeper insight into:

- Contracted vs Actual Quantity
- Produce Quality
- Price Risk
- Traceability

**An offer to get you started**

- Pay 10 months instead of 12 for annual licenses
