Need:

Organizations face many regulatory requirements. Some of the requirements include: The Joint Commission, The Department of Health, Clinical Learning Environment Review (CLER), ACGME Accreditation as well as various designation reviews such as Trauma designation. These accreditation requirements improve organizations by testing the implementation of required standards.

A significant challenge for organizations during these accreditation reviews is how the standards are implemented and how key information is communicated to clinicians. Communication during accreditation preparation is often done by E-mail, teaching sessions and posters which is often missed for a variety of reasons.

Solution: Quris® is a platform designed to solve this problem and streamline the way information is kept up-to-date and available. Quris® takes all your Regulatory content and places it in a central repository. Content is organized in the way that minimizes clicks or touches and includes a powerful search. The information is available via website and app in a format that is intuitive to easily navigate.

Information changes are done centrally and pushed to all platforms at the push of a button resulting in content being updated everywhere. Quris® augments ongoing efforts of accreditation readiness by ensuring the right information is always available.

Benefit – In combination with other efforts, Quris® has been shown to ease the pressure of regulatory communication compliance. Deploying content on Quris® as part of regulatory visit preparation provides clinicians the right information. Content is organized so that clinicians can learn the material before the accreditation visit and reference the material at the time of the visit.

Quris® has already experienced many examples where surveyors asked challenging questions to clinicians who were quickly able to access the information via their mobile app and respond.

Curis® can be easily deployed into an organization and supports the following:

- **Works offline** – no cellular or internet connection required.
- **Measure usage** – analytics provide insight for review and improvement.
- **Instant Alerts** – notify your personnel instantly to important changes/updates.
- **Secure** – can be integrated with your existing security/login systems.
- **EHR/EMR integration** – can be integrated with your clinical systems.
- **Cloud-based** – easy set-up with no demands on existing IT departments.
- **Cost effective** – **monthly/annual license** fee with minimal start-up cost.
