GDPR actively managed with an interactiv Cloud-Solution

As a data security officer, you are responsible at the forefront for the correct implementation of the GDPR. Not only the one-off preparation of the data protection concept and the processes for requests for information and deletion, but also the risk analysis and the continuous adaptation and processing of the various requests require time and organisational effort.

Our actively managed GDPR solution supports you as a data security officer during initial implementation and day-to-day operation.

The solution is operated in a cloud in Western Europe. You receive your own encrypted database. You can order the solution directly on our website.

We make sure that legal adaptations are continuously updated in the Cloud application. With one click you can also activate them on your website.

In the basic offer you will already find examples of processing directories, a list of technical and organisational measures (TOM) and risk assessments in the form of checklists to determine whether action is required for increased data protection and whether a data protection impact assessment must be carried out.

The integrated workflow guides you through requests for information and deletion and through the "reporting procedures". Thanks to the e-mail templates, you save time when processing inquiries from persons and public authorities.

In the event of an audit, you can be sure that you can prove when which data was recorded or changed in the audit-proof GDPR solution.
